Declaration of Conformity

FCC

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at own expense.

CE

The product(s) described in this manual complies with all applicable European Union (CE) directives if it has a CE marking. For computer systems to remain CE compliant, only CE-compliant parts may be used. Maintaining CE compliance also requires proper cable and cabling techniques.

Safety Precautions

- Read these instructions carefully before you install, operate, or transport the system.
- Install the system or DIN rail associated with, at a sturdy location
- Install the power socket outlet near the system where it is easily accessible
- Secure each system module(s) using its retaining screws
- Place power cords and other connection cables away from foot traffic. Do not place items over power cords and make sure they do not rest against data cables
- Shutdown, disconnect all cables from the system and ground yourself before touching internal modules
- Ensure that the correct power range is being used before powering the device
- Should a module fail, arrange for a replacement as soon as possible to minimize down-time
- If the system is not going to be used for a long time, disconnect it from mains (power socket) to avoid transient over-voltage

Service and Maintenance

- ONLY qualified personnel should service the system
- Shutdown the system, disconnect the power cord and all other connections before servicing the system
- When replacing/ installing additional components (expansion card, memory module, etc.), insert them as gently as possible while assuring proper connector engagement

ESD Precautions

- Handle add-on module, motherboard by their retention screws or the module's frame/ heat sink. Avoid touching the PCB circuit board or add-on module connector pins
- Use a grounded wrist strap and an anti-static work pad to discharge static electricity when installing or maintaining the system
- Avoid dust, debris, carpets, plastic, vinyl and styrofoam in your work area.
- Do not remove any module or component from its anti-static bag before installation

About This Manual

This manual introduces Neousys Nuvo-8108GC series featuring Intel[®] 8th/ 9th Gen Core[™] i hexa/ octa core 35W/ 65W LGA1151 processors and an NVIDIA graphics card. The Nuvo-8108GC system supports a 250W NVIDIA[®] graphics card for advanced inference capabilities.

The guide also demonstrates the system's installation procedures.

Revision History

Version	Date	Description
1.0	Apr. 2020	Initial release

1 Introduction

Nuvo-8108GC is rugged Edge AI platform with industrial-grade design and in-vehicle features. Designed specifically to support a high-end 250W NVIDIA® graphics card, it offers tremendous GPU power up to 14 TFLOPS in FP32 for emerging GPU-accelerated edge computing, such as autonomous driving, vision inspection and surveillance/ security.

Nuvo-8108GC is powered by Intel® Xeon® E or 9th/ 8th-Gen Core[™] 8-core/ 6-core CPUs coupled with workstation-grade Intel® C246 chipset to support up to 128 GB ECC or non-ECC DDR4 memory. The system incorporates one pat door 2.5" SATA and one hot-swappable 2.5" trays for easy HDD/ SSD replacement and an M.2 2280 NVMe socket for the ultimate

disk performance. Its front-accessible GbE and USB 3.1 Gen1/ Gen2 ports feature screw-lock mechanisms for securing cable connections. In addition to the x16 PCIe slots (8-lanes) for GPU installation, Nuvo-8108GC has other two x8 PCIe slots (4-lanes) and one x16 PCIe slot (8-lanes) for expansion cards to extend function sets like data collection, analytics and communication.

Nuvo-8108GC has a brand new power delivery design to accept 8~48V wide-range DC input and to handle heavy power requirements from 250W GPU. Along with built-in ignition control, it is feasible to deploy it on a vehicle and directly power it via the car's power system. Mechanical wise, Nuvo-8108GC incorporates Neousys' patented heat dissipation design, damping brackets and patent-pending GPU press bar, making it steady and rock-solid in various conditions. The Nuvo-8108GC is Neousys' response to the never-ending demand of TFLOPS in industrial GPU platforms. With industrial-grade power, thermal and mechanical design, it pushes versatile AI inference applications from laboratories to field applications, where reliability matters.

1.1 Product Specifications

1.1.1 Nuvo-8108GC Specifications

System Core		
	Supporting Intel® Xeon® E and 8 th / 9 th Gen CPU (LGA1151 socket)	
	Intel® Xeon® Processor E-2176G/ 2278GE (8C/16T) / 2278GEL (8C/16T)	
	Intel® Core™ i7-9700E/ i7-9700TE	
	Intel® Core™ i7-8700/ i7-8700T	
Processor	Intel® Core™ i5-9500E/ i5-9500TE	
	Intel® Core™ i5-8500/ i5-8500T	
	Intel® Core™ i3-9100E/ i3-9100TE	
	Intel® Core™ i3-8100/ i3-8100T	
Chipset	Intel® C246 platform controller hub	
Granhian	Independent GPU via x16 PEG port, or integrated Intel® UHD Graphics	
Graphics	630	
Memory	Up to 128 GB ECC/ non-ECC DDR4-2133 SDRAM (four SODIMM slots)	
AMT	Supports AMT 12.0	
ТРМ	Supports TPM 2.0	
I/O Interface		
Ethornot	1x Gigabit Ethernet port by Intel® I219-LM	
Ethernet	1x Gigabit Ethernet port by Intel® I210-IT	
	1x VGA connector, supporting 1920 x 1200 resolution	
Native Video	1x DVI-D connector, supporting 1920 x 1200 resolution	
	1x DisplayPort connector, supporting 4096 x 2304 resolution	
Serial Port	2x software-programmable RS-232/ 422/ 485 ports (COM1/ COM2)	
	4x USB 3.1 Gen2 (10 Gbps) ports	
USB	4x USB 3.1 Gen1 (5 Gbps) ports	
	1x USB 2.0 ports (internal for dongle use)	
Audio	1x 3.5mm jack for speaker-output and microphone-input	
Storage Interface		
SATA	1x hot-swappable HDD tray for 2.5" HDD/ SSD installation	
	1x internal SATA port for 2.5" HDD/ SSD installation, supporting RAID 0/ 1	
M.2	1x M.2 2280 M key socket (PCIe Gen3 x4) for NVMe SSD or Intel® Optane	
	TM memory installation	
mSATA	2x full-size mSATA port (mux with mini-PCIe)	
Expansion Bus		

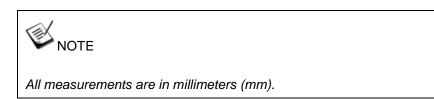

PCI Express	2x PCIe x16 slot@Gen3, 8-lanes								
	2x PCIe x8 slots@Gen3, 4-lanes								
M.2	1x M.2 2242 B key socket supporting dual SIM mode with selected								
	M.2 LTE module								
Mini-PCIe	2x full-size mini PCI Express socket								
Power Supply	·								
DC Input	2x 4-pin pluggable terminal block for 8~48V DC input with ignition control								
Mechanical	·								
Dimension	170 (W) x 202 (H) x 360 (D)								
Weight	~ 5Kg								
Mounting	Neousys' patented damping brackets (standard)								
Environmenta									
Operating	with 35W CPU and an NVIDIA® 250W GPU								
temperature	-25°C ~ 60°C **								
	with >= 65W CPU and an NVIDIA® 250W GPU								
	-25°C ~ 60°C */ ** (configured as 35W TDP mode)								
	-25°C ~ 50°C */ ** (configured as 65W TDP mode)								
Storage	-40°C ~85°C								
temperature									
Humidity	10%~90% , non-condensing								
Vibration	Operating, MIL-STD-810G, Method 514.6, Category 4								
Shock	Operating, MIL-STD-810G, Method 516.6, Procedure I, Table 516.6-II								
* EMC	CE/FCC Class A, according to EN 55022 & EN 55024								

* For i7-8700 and i7-9700E running at 65W mode, the highest operating temperature shall be limited to 50°C and thermal throttling may occur when sustained full-loading applied. Users can configure CPU power in BIOS to obtain higher operating temperature.

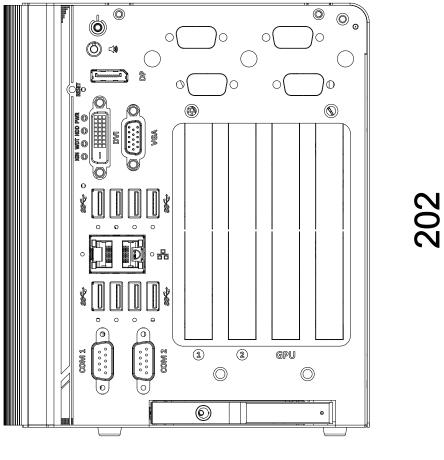

** For sub-zero operating temperature, a wide temperature HDD or SSD is required.

2 System Overview

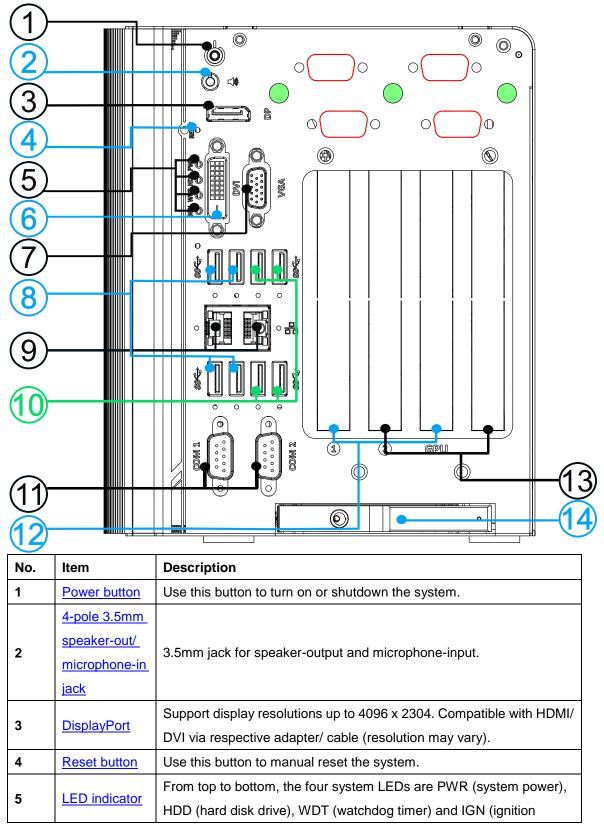

Upon receiving and unpacking your Nuvo-8108GC system, please check immediately if the package contains all the items listed in the following table. If any item(s) are missing or damaged, please contact your local dealer or Neousys Technology.

2.1 Nuvo-8108GC Packing List

System Pack	Nuvo-8108GC								
1	1 Nuvo-8108GC system (If you ordered CPU/ RAM/ HDD, please verify these items)								
	Accessory box, which contains								
	CPU bracket	1							
	Neousys drivers & utilities DVD	1							
	Wall-mount bracket	2							
	Foot pad	4							
	• 4-pin power terminal block	2							
2	 HDD thermal pad for 2.5" HDD/SSD (if HDD is not installed) 	1							
	Graphics card power cable								
	■ 6-pin to 6-pin	1							
	■ 6-pin to 8-pin	1							
	8-pin to 8-pin	1							
	Screw pack	1							
	Rubber spacer	4							

2.2 External I/O Panel

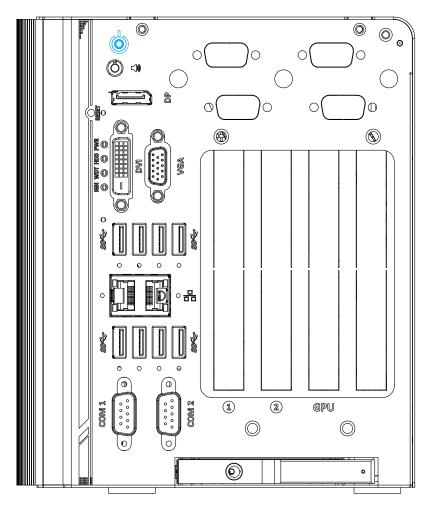

The Nuvo-8108GC I/O panel features Gen2/ Gen1 USB3.0, DisplayPort, DVI, VGA, dual Ethernet and COM ports.

		control).						
6	D)/I port	DVI-D output supports resolution up to 1920x1200@60Hz and is						
0	DVI port	compatible with other digital connections via an adapter.						
7	VGA port	VGA output supports resolution up to 1920x1200@60Hz						
		USB3.1 Gen 2 port (SuperSpeed+) offers up to 10Gbps, twice the						
8	USB 3.1 Gen2	bandwidth over existing SuperSpeed USB3.1 Gen. 1 connection. It is						
	port	also backwards compatible with USB3.0 and USB2.0						
9		1x Gigabit Ethernet port by Intel® I219-LM						
9	<u>GbE port</u>	1x Gigabit Ethernet port by Intel® I210-IT						
10	USB 3.1 Gen1	USB3.1 Gen 1 offers up to 5Gbps of data-throughput performance						
10	port	Cobo. To cent i oners up to coops of data-timoughput performance						
11		The software-selectable RS-232/422/485 ports. The operation mode						
11	COM port	of COM1 and COM2 can be set in BIOS.						
12	GPU slots	2x PCIe x16 slot @ Gen3, 8-lanes expansion slot						
13	PCIe slots	2x PCIe x8 slots @ Gen3, 4-lanes expansion slot						
	<u>2.5" HDD/</u>							
14	SSD slot	The HDD expansion tray offer hot-swap ability						
		Reserved antenna opening						
		Reserved DB9 connector opening						

2.2.1 Power Button

The power button is a non-latched switch for ATX mode on/off operation. To turn on the system, press the power button and the PWR LED should light-up green. To turn off the system, issuing a shutdown command in OS is preferred, or you can simply press the power button. To force shutdown when the system freezes, press and hold the power button for 5 seconds. Please note that there is a 5-second interval between on/off operations (i.e. once the system is turned off, there is a 5-second wait before you can power-on the system).

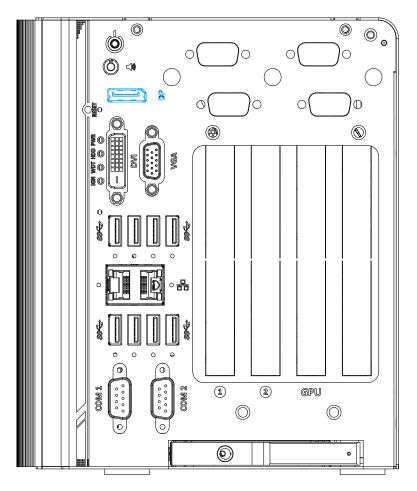

2.2.2 4-pole 3.5mm Speaker-out/ Microphone-in Jack

The system audio function uses high definition audio. There is a female 4-pole audio jack for headphone (speaker) output and microphone input. To utilize the audio function in Windows, you need to install corresponding drivers for both Intel[®] C246 chipset and audio device drivers.

2.2.3 DisplayPort

The DisplayPort (DP) output is a digital display interface that mainly connect video source and carry audio to a display device. When connecting a DP, it can deliver up to 4K UHD (4096 x 2304) in resolution. The system is designed to support passive DP adapter/ cable. You can connect to other display devices using DP-to-HDMI cable or DP-to-DVI cable.

DP-to-HDMI

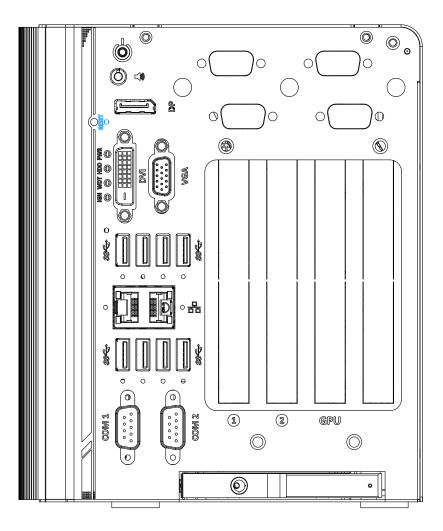

The system supports triple independent display outputs by connecting display devices to VGA, DVI and DisplayPort connection. To support multiple display outputs and achieve best

DP-to-DVI

DisplayPort output resolution in Windows, you need to install corresponding graphics drivers. Please refer to section <u>OS Support and Driver Installation</u> for details.

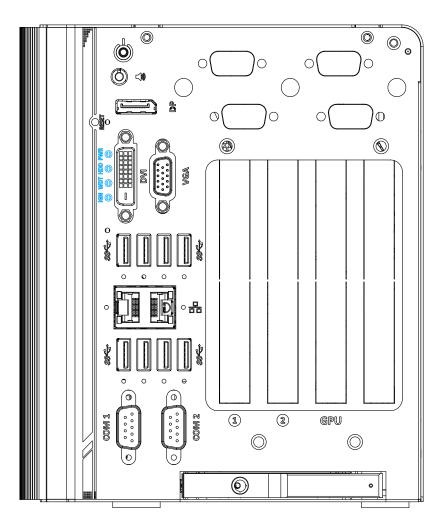

2.2.4 Reset Button

The reset button is used to manually reset the system in case of system halt or malfunction. To avoid unexpected reset, the button is purposely placed behind the panel. To reset, please use a pin-like object (eg. tip of a pen) to access the reset button

2.2.5 LED Indicators

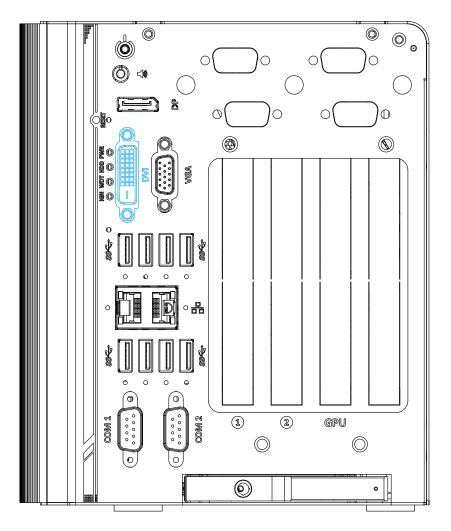

There are four LED indicators on the I/O panel: PWR, HDD, WDT and IGN. The descriptions of these four LED are listed in the following table.

Indicator	Color	Description
PWR	Green	Power indictor, lid when system is on.
HDD	Red	Hard drive indicator, flashing when hard disk drive is active.
WDT	Yellow	Watchdog timer LED, flashing when WDT is active.
IGN	Yellow	Ignition signal indicator, lid when IGN is high (12V/24V).

2.2.6 DVI Port

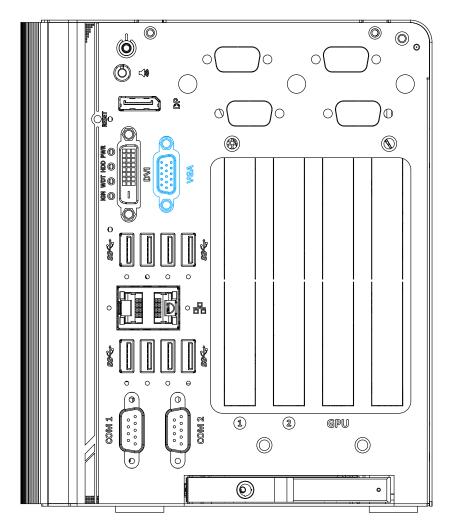

DVI-D transmits graphics data in digital format and therefore can deliver better image quality at high resolution. The DVI connector on the front panel can either output DVI signals or other digital signals (via an adapter/ cable) depending on the display device connected. It supports resolutions up to 1920x1200@60Hz.

The system supports triple independent display outputs by connecting display devices to VGA, DVI and DisplayPort. To support multiple display outputs and achieve best DVI output resolution in Windows, you need to install corresponding graphics driver. Please refer to section OS Support and Driver Installation for details.

2.2.7 VGA Port

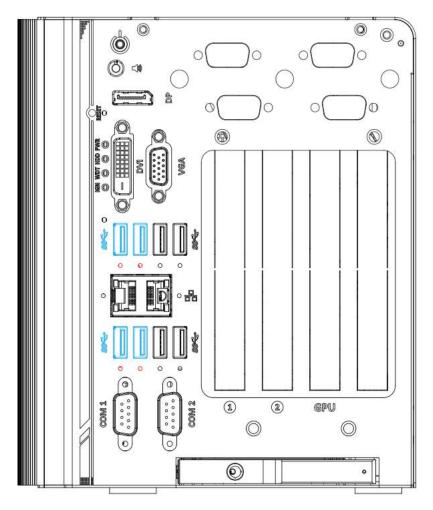

VGA connector is the most common video display connection. The VGA output supports up to 1920x1200@60Hz resolution.

The system supports triple independent display outputs by connecting display devices to VGA, DVI and DisplayPort. To support multiple display outputs and achieve best VGA output resolution in Windows, you need to install corresponding graphics drivers. Please refer to section <u>OS Support and Driver Installation</u> for details.

Please make sure your VGA cable includes SDA and SCL (DDC clock and data) signals for correct communication with monitor to get resolution/timing information. A cable without SDA/ SCL can cause blank screen on your VGA monitor due to incorrect resolution/timing output.

2.2.8 USB3.1 Gen 2 Port

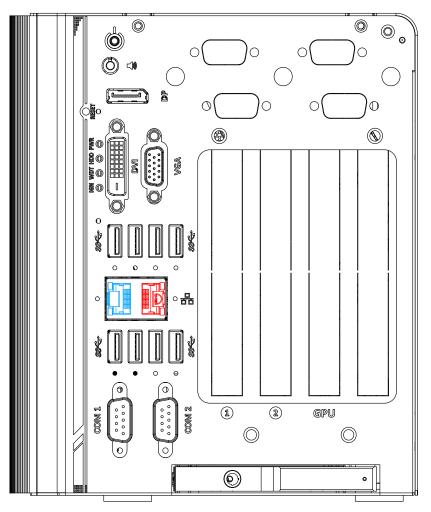

The system's USB 3.1 Gen 2 ports (10Gbps) are implemented via native xHCI (eXtensible Host Controller Interface) controller and are backward compatible with USB3.1 Gen.1 USB 2.0, USB 1.1 and USB 1.0 devices. Legacy USB is also supported so you can use USB keyboard/mouse in DOS environment. There are also screw-lock openings (indicated in **red**) for each USB port.

xHCI driver is supported natively in Windows 10, therefore you do not need to install xHCI driver in prior to utilize USB functions.

2.2.9 Gigabit Ethernet Port

The system offers 2 GbE ports on its I/O panel. The GbE ports are marked in **blue**/ **red** and are implemented with Intel[®] I219-LM/ Intel[®] I210-IT controllers, respectively. Each port has one dedicated PCI Express link for maximum performance. When an Ethernet connection is established, the LED indicators on the RJ45 connector represents the following connection statuses:

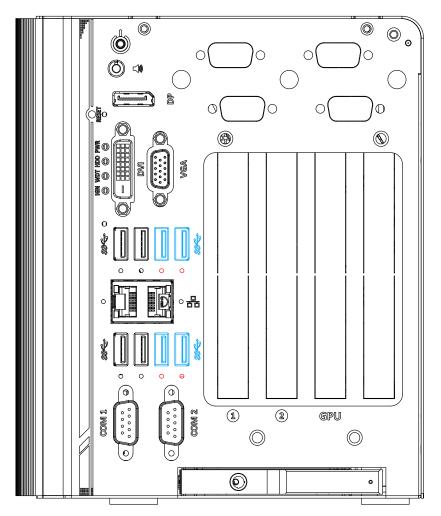

LED Color	Status	Description							
	Off	Ethernet port is dis	sconnected						
Green	On	Ethernet port is connected and no data transmission							
	Flashing	Flashing Ethernet port is connected and data is transmitting/receiv							
Speed LED									
LED Color	Status	Description							
Croop or	Off	10 Mbps							
Green or Orange	Green	100 Mbps							
	Orange	1000 Mbps							

Active/Link LED

The port implemented using Intel[®] I219-LM (in **blue**) supports Wake-on-LAN function. Drivers may be required to utilize the GbE port in Windows environment.

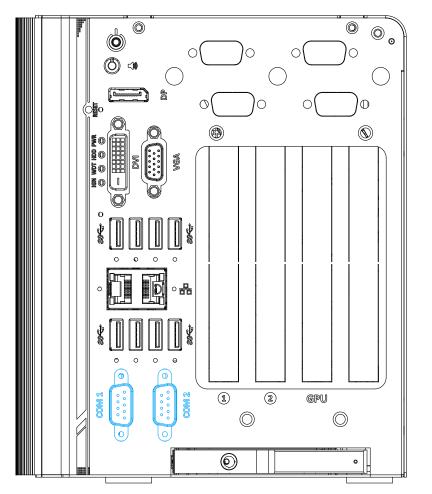

2.2.10 USB3.1 Gen 1 Port

The system's USB 3.0 Gen 1 ports (5Gbps) are implemented via native xHCI (eXtensible Host Controller Interface) controller and are backward compatible with USB 2.0, USB 1.1 and USB 1.0 devices. Legacy USB is also supported so you can use USB keyboard/mouse in DOS environment. There are also screw-lock openings (indicated in red) for each USB port. xHCI driver is supported natively in Windows 10, therefore you do not need to install xHCI driver in prior to utilize USB functions.

2.2.11 COM Port

The two COM ports are implemented using industrial-grade ITE8786 Super IO chip (-40 to 85°C) and provide up to 115200 bps baud rate.

COM1 and COM2 (in **red**) are software-configurable RS-232/422/485 ports. COM3 and COM4 (in **blue**) are standard 9-wire RS-232 ports. The operation mode of COM1 and COM2 can be set in BIOS setup utility. The following table describes the pin definition of COM ports.

	COM1 & COM2									
Pin#	RS-232 Mode	RS-422 Mode	RS-485 Mode							
1	DCD									
2	RX	422 TXD+	485 TXD+/RXD+							
3	ТХ	422 RXD+								
4	DTR	422 RXD-								
5	GND	GND	GND							
6	DSR									
7	RTS									

COM Port Pin Definition

Nuvo-8108GC

8	CTS	422 TXD-	485 TXD-/RXD-
9	RI		

2.2.12 2.5" HDD/ SSD Hot-swappable Slot

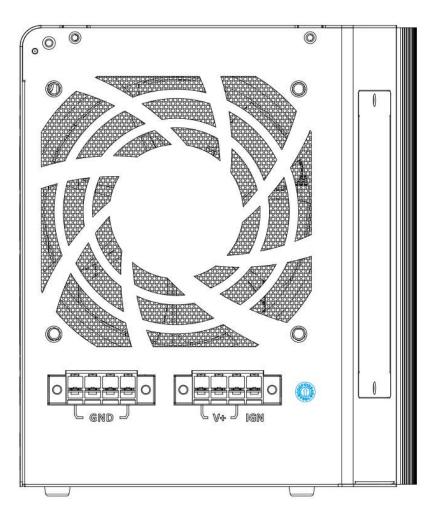

The system has an external 2.5" HDD/ SSD via a hot-swappable slot. Designed for easy access, the HDD/ SSD slot is secured by a lock (indicated in **red**)and it supports RAID modes 0/ 1 configuration by combining with the internal HDD/ SSD drive for OS installation (coupled with the internal HDD). To set up RAID, please refer to RAID Volume Configuration section for details.

2.3 Ignition/ Dual 4-Pin Terminal Block

The system accepts a wide range of DC power input from 8 to 48V via dual 4-pin pluggable terminal block, which is fit for field usage where DC power is provided. The screw clamping mechanism on the terminal block offers connection reliability when wiring DC power. In addition to DC power input, this terminal block can also accept ignition signal input (IGN) for in-vehicle applications.

Please make sure the voltage of DC power is correct before you connect it to the system. Supplying a voltage over 48V will damage the system.

2.4 Ignition Control Switch

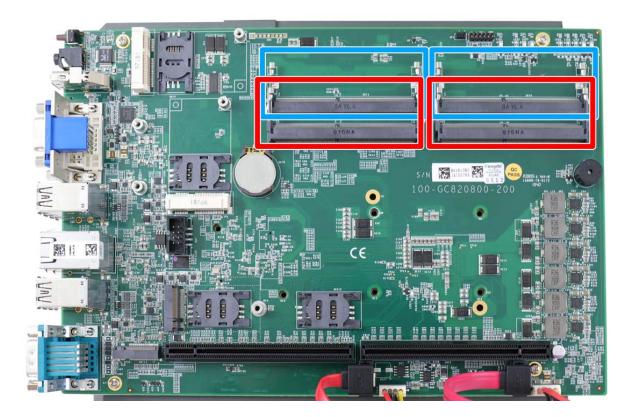

The ignition power control switch features multiple modes for pre and post ignition settings. Please refer to the section Ignition Power Control for details. Please use a flathead screwdriver to adjust the position of the ignition power control switch.

For details, please refer to the section Ignition Power Control for details

2.5 Internal I/O Functions

In addition to I/O connectors on the front panel, the system also provides internal on-board connectors, such as remote on/off control, LED status output, etc. In this section, we'll illustrate these internal I/O functions.

2.5.1 SODIMM DRAM Slot

The system motherboard supports four 260-pin SODIMM socket for installing ECC/ non-ECC DDR4 memory module up to 128GB. Each slot supports single module DDR4 2133MHz SODIMM up to 32GB capacity.

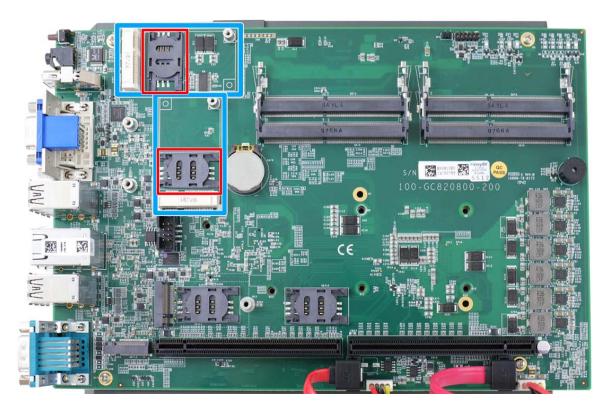

NOTE

When changes are made to DRAM module(s), such as additionally install or remove and reinstall (into the same/ different slot, it will result in an approximately 30~60 seconds delay when booting up for the first time after such change(s).

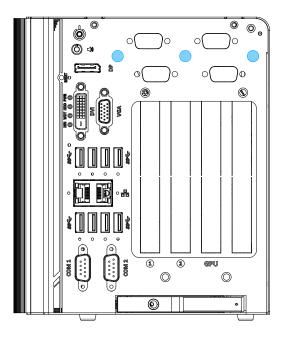

2.5.2 mini-PCIe Socket & Pin Definition

The system provides dual mini-PCIe sockets (indicated in **blue**) that are in compliance with mini-PCIe specification rev. 1.2. This mini-PCIe socket is designed with SIM card (slot indicated in **red**) support. With a SIM card installed, your system can access the internet via your network provider's 3G/ 4G network.

For wireless (WIFI/ 3G/ 4G) communication, multiple SMA antenna apertures can be located on the front and rear panel.

49	Reserved	50	GND
51	Reserved	52	3.3V

Some off-the-shelf mini-PCIe 4G modules are not compliant to standard mini-PCIe interface. They use 1.8V I/O signals instead of standard 3.3V I/O and may have signal conflict. Please consult with Neousys for compatibility when in doubt!

Installing an incompatible 4G module may damage the system or the module itself may be damaged.

2.5.3 M.2 2242 (B Key), Mini-SIM Card Slot & Pin Definition

The dual SIM card functionality is only available when Sierra Wireless EM7455/7430 solution is installed. For other 4G add-on solutions, SIM card slot 1 is the default functioning slot.

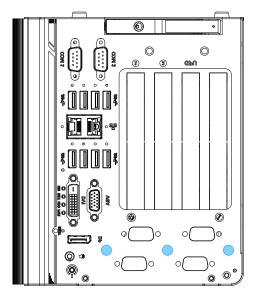

The system has an M.2 2242 slot (indicated in **blue**) that works with dual SIM slots (4G + 3G), one directly underneath and next to the slot (indicated in **red**). By installing a 3G or 4G M.2

module and SIM card, you can access the internet via the provider's network.

For wireless 3G/4G, SMA antenna apertures are located on front/ rear panels.

2.5.4 SATA Port

Supports up to 15mm thickness HDD/ SSD.

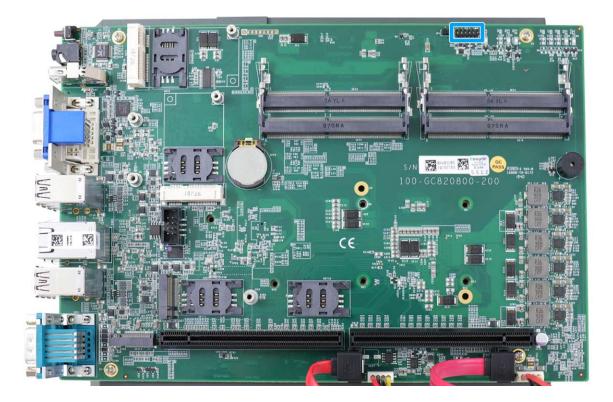

The system provides two SATA ports which support Gen3, 6 Gb/s SATA signals. Each SATA port (indicated in **blue**) features a 7-pin SATA connector and a 4-pin power connector.

The power connector (indicated in **red**) each accommodates a 2.5" HDD/ SSD in internal HDD bracket. Standard 22-pin SATA connectors are provided with the system. You may refer to the SATA Configuration section for SATA settings.

2.5.5 On/ Off Ctrl & Status Output

For an application which places the system inside a cabinet, it's useful to have an external system status LED indicators. The system provides a 2x6, 2.0mm pitch pin header to output system status such as power, HDD, watchdog timer, and control system on/ off remotely.

The status LED output has a built-in series-resistor and provides 10mA current to directly drive the external LED indicators. System on/ off control is also provided so you can use an external non-latched switch to turn on/ off the system exactly the same as the power button on the front panel. The following table describes the pin definition of the status LED output.

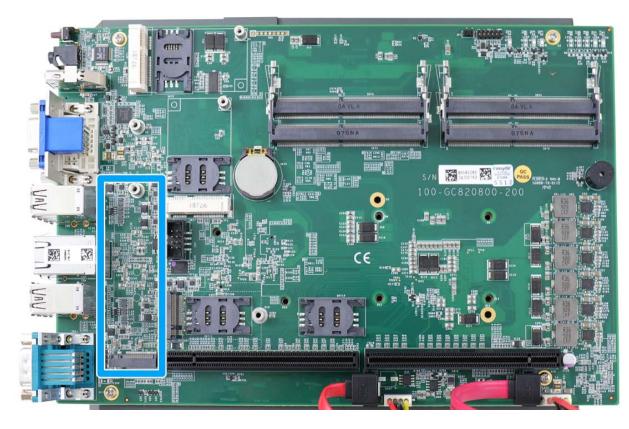

Pin Definition

	\frown	\frown	\frown	\frown	\frown	\frown	۱. ۱
2	0	0	0	0	0	0	12
1	0	0	0 0	0	0	0	11
- 6			\square			-	'

Pin#	Definition	Description
1	WDT_LED-	[Output] Watchdog timer indicator, flashing when Watchdog
2	WDT_LED+	timer is active
3	Standby Power-	[Output] Standby power indicator, on if DC power is applied
4	Standby Power+	and system is in S5 (standby) mode.
5	HDD-	[Output] Hard drive indicator, flashing when SATA hard
6	HDD+	drive is active.
7	Power-	[Output] System power indicator, on if system is turned on,
8	Power+	off if system is turned off.
9	Ctrl-	[Input] Remote on/off control, connects to an external
10	Ctrl+	switch to turn on/off the system (polarity is negligible).
11	IGN_LED-	[Output] Ignition control indicator, on if ignition control is on,
12	IGN_LED+	off if ignition control is off.

2.5.6 M.2 2280 (M Key) Slot for NVMe SSD or Optane[™] Memory

The system has a x4 PCIe M.2 2280 slot for you to install an NVMe SSD for the ultimate performance or an Intel[®] Optane[™] memory to accelerate the read/ write performances of traditional hard disk drive. An NVMe SSD offers exceptional performance over 2.5" SSDs while Intel[®] Optane[™] memory can dramatically boost your traditional hard disk drives' read/ write performances.

The M.2 slot will automatically detect and configure the slot to run PCIe or SATA signal depending on the installed device.

2.5.7 Internal USB Port on Extension Board

The system's extension board has an internal USB2.0 port on the PCBA. You can utilize this USB port to connect a USB protection dongle inside the chassis of the system.

2.5.8 The 4-pin Molex

The 4-pin molex connector can be found on the extension board. It can provide additional power supply for power hungry add-on cards such as PCIe PoE cards. The pin definition are as follows:

Nuvo-8108GC

Pin number	Color	Definition
1	Red	+12V
2	Black	Gnd
3	Black	Gnd
4	Yellow	+5V

3 System Installation

Before disassembling the system enclosure and installing components and modules, please make sure you have done the following:

- It is recommended that only qualified service personnel should install and service this product to avoid injury or damage to the system.
- Please observe all ESD procedures at all times to avoid damaging the equipment.
- Before disassembling your system, please make sure the system has powered off, all cables and antennae (power, video, data, etc.) are disconnected.
- Place the system on a flat and sturdy surface (remove from mounts or out of server cabinets) before proceeding with the installation/ replacement procedure.

3.1 Disassembling the System

To access system internal components, the system needs to be disassembled. To disassemble the system enclosure, you need to remove screws on the I/O panel, removable side panel and system ventilation panel.

1. On the I/O panel side, unscrew the screws indicated below.

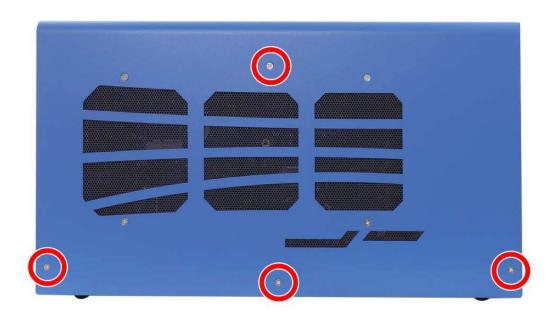

2. Unscrew the screw indicated on top of the enclosure.

3. Unscrew the screws indicated on the removable side panel shown below.

4. On the rear panel, remove the screw indicated below.

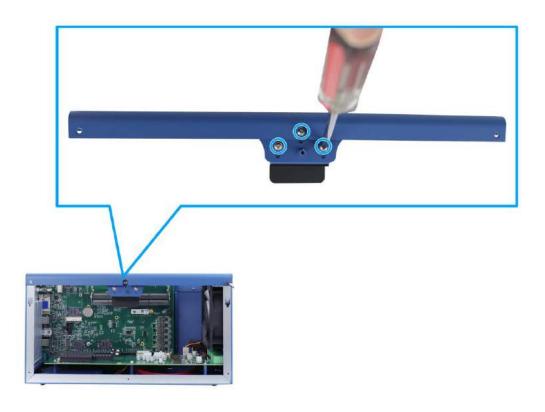

5. Lift the L-shaped side panel to separate it from the enclosure.

6. Once the L-shaped side panel has been removed, proceed to remove the graphics card's stabilizer plate by removing the three screws.

7. You do not need to remove the fan in order to remove the extension board. The fan is removed in the illustration below on purpose to better indicate the screws that are holding the motherboard in place. To separate the extension board from the motherboard without uninstalling the fan, please disconnect the 4-pin fan connector (indicated in blue) to the motherboard and remove the screws indicated below (indicated in red).

Remove 4-pin fan connector

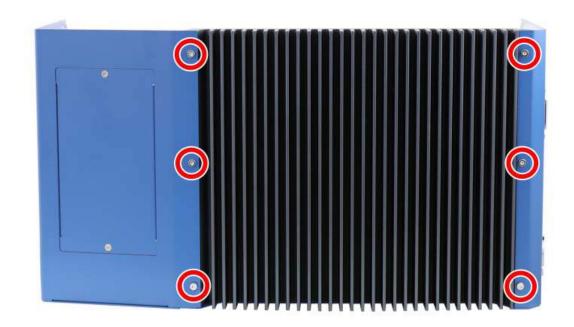

Remove screws to separate the extension board from the motherboard

Please disengage the extension board gradually as there are capacitors situated underneath the PCIe slots that may come in contact with enclosure structures when removed with excessive force.

8. Separate the motherboard/ heatsink from the enclosure by unscrewing the hex bolt screws indicated below.

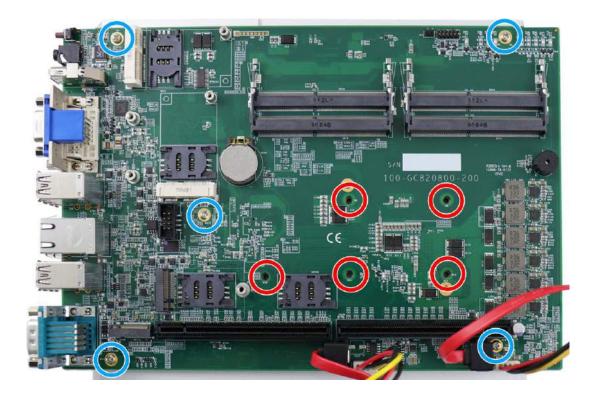

9. The system's internal I/Os are now accessible and the CPU is ready for installation once the motherboard is separated from the heatsink. Please refer to the CPU installation section on how to separate the motherboard from the heatsink.

3.2 Installing Internal Components

3.2.1 CPU Installation Procedure

- 1. To install the CPU, you will need to separate the heatsink and the motherboard.
- Remove the screws indicated in blue to separate the motherboard from the heatsink. If your system already has a CPU installed, you will also need to remove screws in locations indicated in red.

3. Gently separate the motherboard from the heatsink, you'll see the CPU socket protective cover, place finger tips underneath the sign "REMOVE" for leverage and gently lift the cover.

With the protective cover removed, please be careful when handling the motherboard. DO NOT touch the pins in the LGA socket!

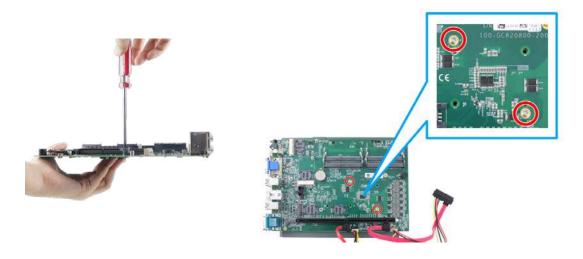

4. Remove the CPU from its container/ tray. Match the two notches on the side to the protrusions in the socket, gently lower the CPU into the socket.

5. Locate the CPU retention bracket from the accessory box. Place the retention bracket on the CPU and hold it in place.

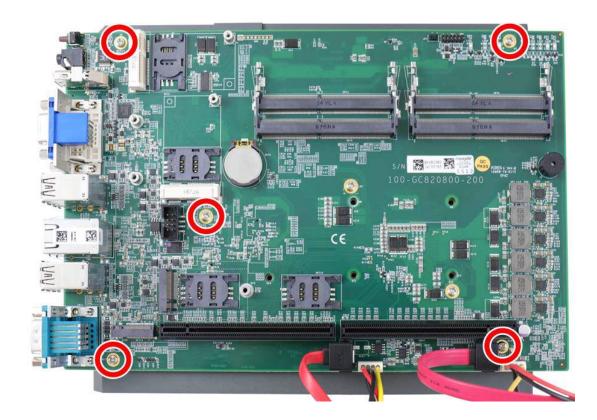

6. Turn the motherboard around and secure the bracket by tightening two M3 P-head screws.

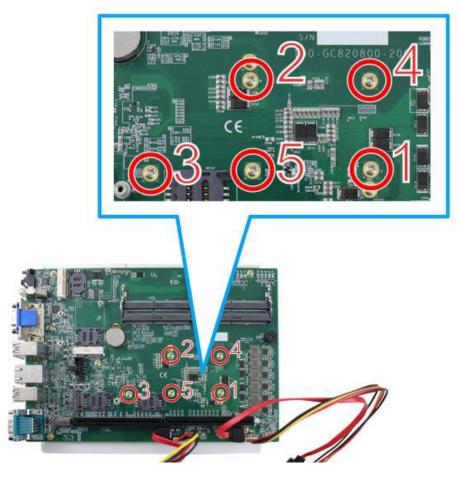

Hold CPU bracket firmly and turn the motherboard around Secure two M3 P-head screws

- 7. Remove all thermal pads' protective films on the heatsink.
- 8. With the motherboard standoffs aligned, gently lower the motherboard onto the heatsink and secure the screws indicated.

9. Once the motherboard has been installed, you're ready to secure the five screws that help the heatsink apply pressure to the CPU/ chipset die. You'll want to apply even pressure to the corners by gradually tightening each screw. Please refer to the recommended order when tightening the screws.

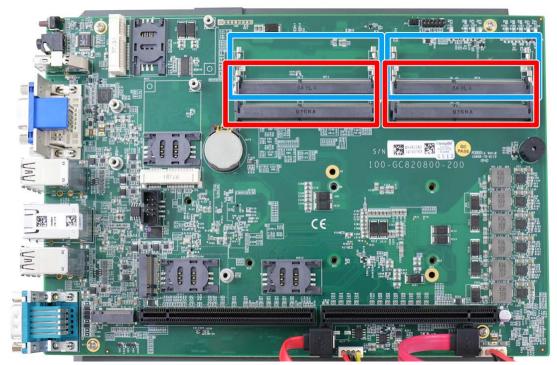

- 10. Reinstall the system panel when done.
- 11. If you need to install other components, please refer to respective sections.

3.2.2 DDR4 SO-DIMM Installation

There are four SO-DIMM memory slots on the motherboard that supports a total maximum of 128GB DDR4-2133. Please follow the procedures below to replace or install the memory modules.

- 1. Please refer to the section "Disassembling the System".
- 2. Locate the SODIMM memory module slots on the motherboard. Please make sure you install to the slots indicated in blue first, then the slots indicated in red.

3. To install the memory module, insert gold fingers into the slot at 45-degree angle, push down on the memory module to clip the module into position.

4. Push the memory module down until it is clipped-in.

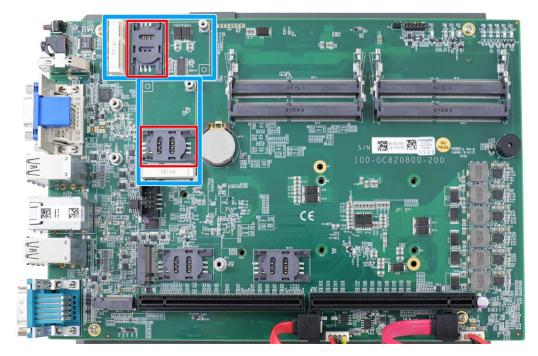

- 5. Repeat steps 3 and 4 to install other modules.
- 6. <u>Reinstall the system enclosure</u> and panel when done.
- 7. If you need to install other components, please refer to respective sections.

3.2.3 mPCle Module, Mini-SIM (2FF) Card and Antennae Installation

The system has two mPCIe slot (indicated in **blue**)coupled with Mini-SIM socket (indicated in **red**)for installing 3G/4G module. For installation, please refer to the following instructions.

- 1. Please refer to the section "Disassembling the System".
- 2. Locate the mPCIe and SIM card slots on the motherboard.

3. Before installing the mPCIe module, you need to insert the Mini-SIM card. Slide the SIM slot holder and lift the SIM card holder. Insert the Mini-SIM card (pins facing up), shut the SIM holder and slide it to lock the SIM card in-place.

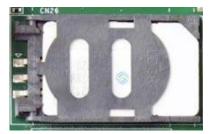

Slide and lift SIM card holder

Insert Mini-SIM card with pins facing up

4. Secure the Mini-SIM card by sliding the holder.

5. Insert the mPCIe module on a 45 degree angle into the mPCIe slot and secure the module.

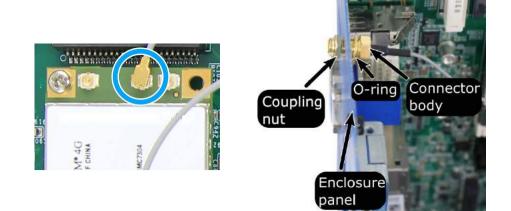

Insert on 45 degree angle

Secure the module

6. Clip on the IPEZ-to-SMA cable to the module and secure the antenna to the front or rear panel. Please refer to the module's manual for clip-on connection.

Clip on IPEZ-to-SMA cable

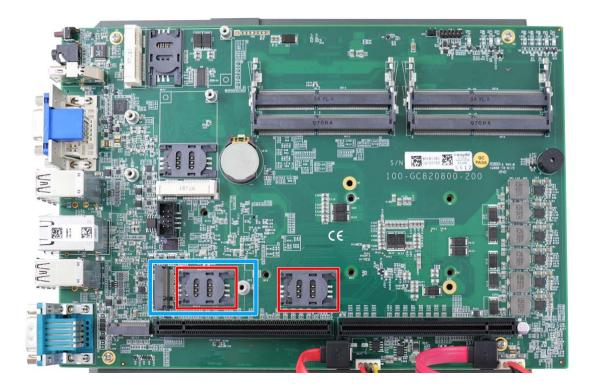

- 7. <u>Reinstall the system enclosure</u> and panel when done.
- 8. If you need to install other components, please refer to respective sections.

3.2.4 M.2 2242 (B Key) Module and Micro-SIM (3FF) Card Installation

The system has an M.2 slot (indicated in **blue**) for installing 3G/4G module that can be coupled with dual Micro-SIM card slots (indicated in **red**). For installation, please refer to the following instructions.

- 1. Please refer to the section "Disassembling the System".
- 2. Locate the M.2 2242 (B Key) and SIM card slots on the motherboard.

3. Insert the module on a 45 degree angle.

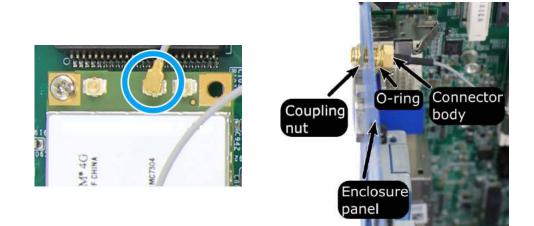

4. Gently press down and secure the module with an M2.5 P-head screw.

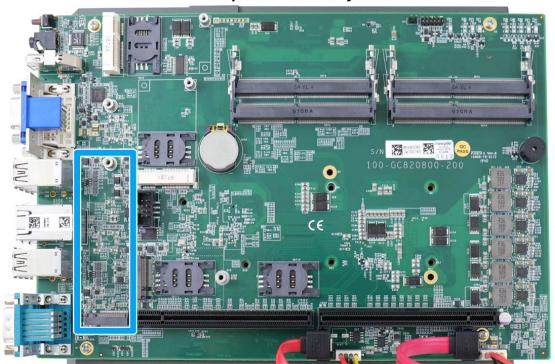

5. Clip on the IPEZ-to-SMA cable to the module and secure the antenna to the front or rear panel. Please refer to the module's manual for clip-on connection. If you need to install other components, please refer to respective sections.

Clip on IPEZ-to-SMA cable

Secure antenna to rear panel

- 6. With the motherboard exposed, the SIM card is inserted with the gold fingers facing downward. If you are inserting the SIM card with the system upright (heatsink fins upwards), the gold fingers should be facing upward. The SIM socket is a push-push type. The push-push mechanism means the SIM card is push-to-install and push-to-retrieve
- 7. <u>Reinstall the system enclosure</u> and panel when done.
- 8. If you need to install other components, please refer to respective sections.

3.2.5 M.2 2280 NVMe SSD or Intel[®] Optane[™] Memory Installation

The system has a x4 PCIe M.2 2280 slot for you to install an NVMe SSD for the ultimate performance or an Intel® Optane[™] memory to accelerate the read/ write performances of traditional hard disk drive. An NVMe SSD offers exceptional performance over 2.5" SSDs while Intel® Optane[™] memory can dramatically boost your traditional hard disk drives' read/ write performances. For installation, please refer to the following instructions.

- 1. Please refer to the section "<u>Disassembling the System</u>", you may not need to completely dismantle the system to gain access to the M.2 slot.
- 2. Insert the module on a 45 degree angle.

3. Gently press down and secure the module with an M2.5 P-head screw.

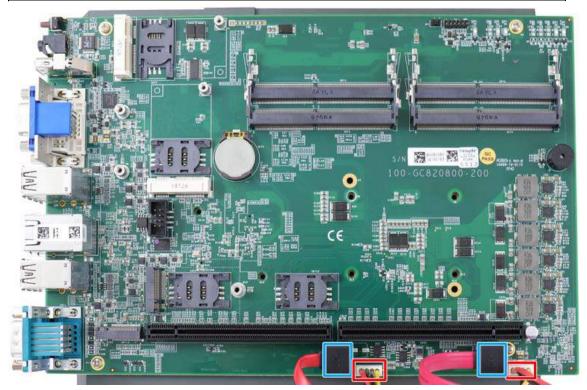

- 4. <u>Reinstall the system enclosure</u> and panel when done.
- 5. If you need to install other components, please refer to respective sections.
- 6. Please refer to the section <u>Intel[®] Optane[™] Memory BIOS Setup and Driver Installation</u> for traditional hard drive acceleration.

3.2.6 HDD/ SSD Installation

Supports up to 15mm thickness HDD/ SSD.

The system has two SATA ports (indicated in **blue**) and two four pin power connectors (indicated in **red**). One set of the SATA/ power cables is connected to the front hot-swappable slot while the other can be connected to the tray in the enclosure. Please refer to the following instructions on how to install 2.5" SATA HDD/SSD onto the enclosure tray.

 Locate the hard drive tray on the enclosure. It is located next to the motherboard heatsink. Remove the screws indicated and retrieve the tray out of the enclosure.

2. Place the HDD/ SSD (with labels facing up) and secure it with the supplied four flathead screws (two on each side).

 At the tray opening, you should be able to locate the 22-pin SATA cable, connect it to the installed HDD/ SSD. Due to cable length limitations, the connector side of the HDD or SSD should be facing towards the bottom of the enclosure.

4. Insert the tray back into the system and secure it with two screws you removed earlier.

5. If you need to install other components, please refer to respective sections.

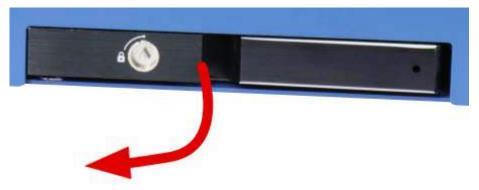

3.2.7 Installing HDD/ SSD to Hot-swappable Tray

The system has one external HDD/ SSD hot-swappable tray. It can be located at the bottom of the I/O panel.

 You may insert and install the HDD/ SSD without disassembling the enclosure. Simply lift to spring open the lever to gain access to the hot-swap slot.

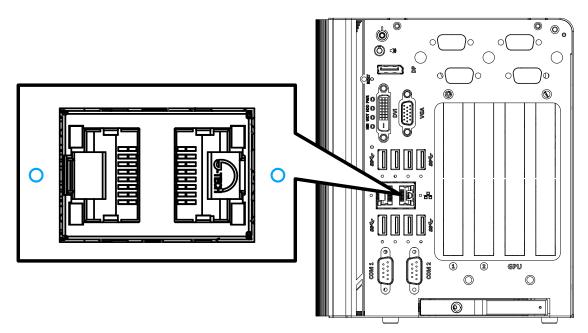

2. Insert the HDD/ SSD (with labels facing up) and the SATA connector end towards the slot, insert it 3/4 of way in and use the lever to fully push the HDD/ SSD into the slot. You should hear a click sound to ensure the HDD/ SSD is properly inserted and engaged.

3. If you need to install other components, please refer to respective sections.

3.2.8 Ethernet Port Panel Screw Fix

The system's RJ45 Ethernet ports have panel screw fix holes (indicated in **blue circles**) for a firm cable connection.

1. To install and make use to the panel screw fix connection, you must acquire panel screw fix cables such as the cable shown below.

2. Simply insert the RJ45 connector into the RJ45 port and secure the top and bottom screws using your fingers or a screw driver.

3.3 Graphics Card Installation

To reduce the risk of damage, **DO NOT** remove the graphics card from the antistatic bag before it is ready to be installed into the Cassette module!

For installation compatibility, please consult with Neousys before purchasing a graphics card.

The system can support an NVIDIA graphics card up to 250W. The placement of the rear exhaust fan creates a sealed wind tunnel to bring in cold air to the graphics cards and expels hot air to offer extreme system stability and reliability. To install a PCIe graphics card, please refer to the following procedure:

To install a PCIe graphics card into the Cassette module, please refer to the following procedure:

- 1. Please refer to the section "Disassembling the System".
- 2. Locate the PCIe x16 slots on the daughter board (indicated in red).

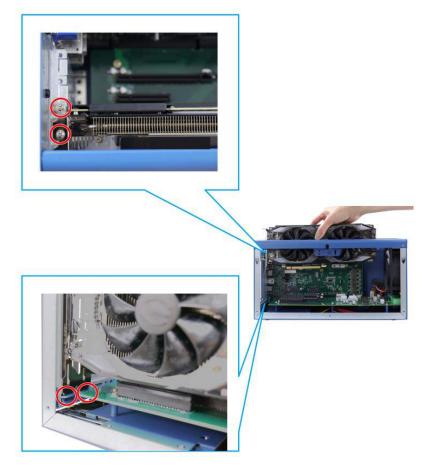

3. Remove the corresponding enclosure bezel(s) to the PCIe slot you wish to install to.

4. Remove the graphics card from the antistatic bag and gently lower it into the PCIe slot while ensuring the gold-fingers meet, graphics card panel is properly inserted and secured with screws.

5. Connect power cables from the daughter board to the graphics card.

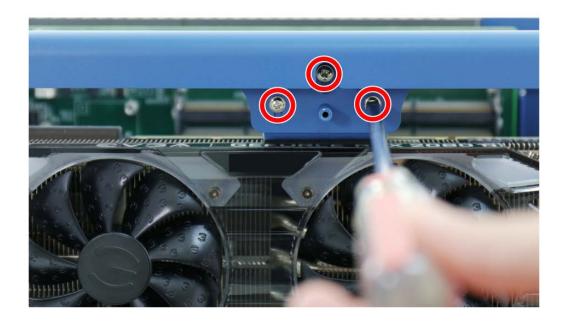

6/ 8-pin power connector on daughter board

6 or 8/8-pin power connector on graphics card

Please make sure you use short power cables for the graphics card installed closest to the motherboard and long power cables for the graphics card installed furthest from the motherboard.

A variety of 6-pin to 8-pin / 8-pin to 8-pin power cables are provided, please refer to the packing list for details.

6. To complete the graphics card installation, please install the stabilizer plate you removed during the disassembly process. Simply lower the stabilizer plate to firmly press onto the graphics card, secure the screws indicated to complete the graphics card installation.

7. If you need to install other components, please refer to respective sections.

3.4 Installing the System Enclosure

Place L-shape side panel onto the enclosure

Slide-and-lock into the indicate hinges

1. To reinstall the system enclosure, place the L-shape panel onto the enclosure while making sure the notch inside the panel is inserted into the slide-and-lock hinges.

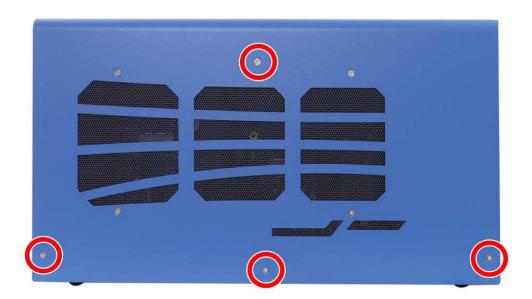

2. Secure the screws indicated on the I/O panel.

3. Secure the screw indicated on top of the enclosure.

4. Secure the screws indicated on the side panel shown below.

10. Finally on the rear panel, secure the screws indicated on the rear panel to complete the enclosure assembly process.

11. For other component installation procedures, please refer to their respective sections.

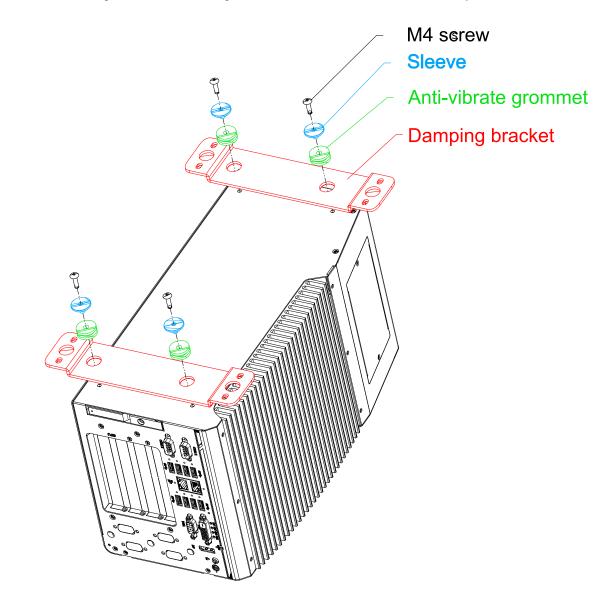

3.5 Anti-vibration Damping Bracket Installation

You will need to remove the four (4) rubber stands at the bottom of the enclosure if they have been attached.

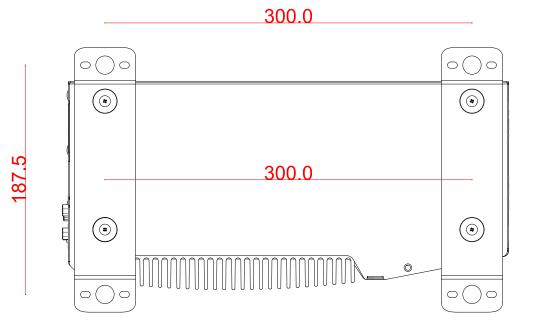

The damping bracket offers superior operating vibration resistance up to 1Grm with HDD or up to 5Grm with SSD. Please refer to the Nuvo-8108GC exploded illustration below on installing damping bracket. The damping brackets and screws can be found in the accessory box.

1. Take out the two anti-vibration damping brackets, four M4 screws, four sleeves and four anti-vibration grommets from the accessory box. Insert the M4 screws into the sleeves and through the anti-vibration grommets to secure the brackets to the system.

2. Place the system on a flat surface and secure it with screws.

105.0

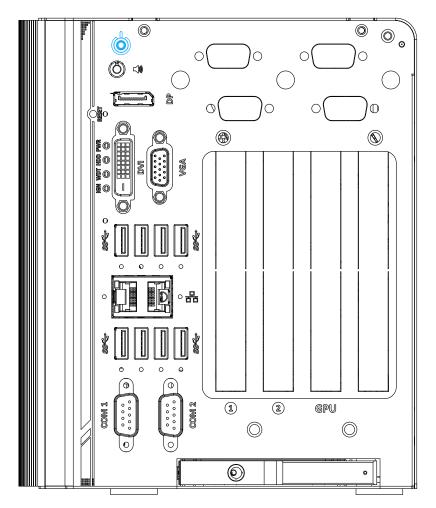

3.6 **Powering On the System**

There are three methods to power on the system

- Pressing the power button
- Sending a LAN packet via Ethernet (Wake-on-LAN)
- Powering on via ignition control (please refer to Ignition Control section)

3.6.1 Powering On Using the Power Button

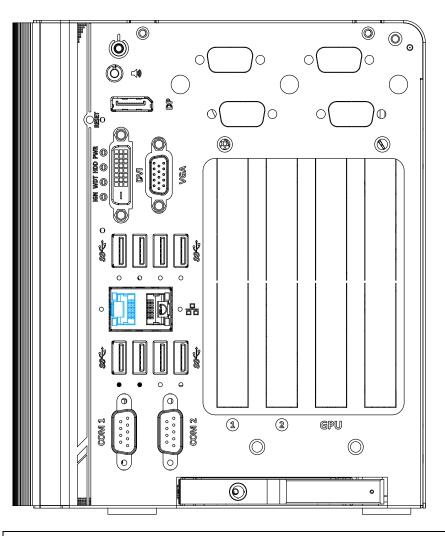

This is the simplest way to turn on your system. The power button is a non-latched switch and behaves as the ATX-mode on/off control. With DC power connected, pushing the power button will turn on the system and the PWR LED indicator will light up. Pushing the button when system is on will turn off the system. If your operating system supports ATX power mode (i.e. Microsoft Windows or Linux), pushing the power button while the system is in operation will result in a pre-defined system behavior, such as shutdown or hibernation.

3.6.2 Powering On Using Wake-on-LAN

Wake-on-LAN (WOL) is a mechanism to wake up a computer system from a S5 (system off with standby power) state via issuing a magic packet. The system's Wake-on-LAN compatible GbE port is shown below.

NOTE

Please make sure the Intel chipset and Ethernet driver has been properly installed prior to setting up WOL function.

To enable WOL function, please set up WOL settings in the BIOS and in the operating system by follow the steps described below.

- 1. When the system boots up, press F2 to enter BIOS setup utility.
- 2. Go to the [Power]>[Wake On LAN] and set it to [Enabled].
- 3. Press F10 to "**Save changes and exit BIOS**" and allow the system boot into the operating system.
- 4. Once booted into the Windows system, press "Windows key + E", right-click on

"Network>Properties>Change adapter settings". Locate and double-click on the adapter Intel® I219 Gigabit Network Connection, click on Configure...

 Click on the Power Management tab and check the following options. Click on OK when done.

Intel(R) Ethernet Connection (2) I219-LM Properties					
Teaming General	VLANs Link Speed	Driver Advanced	Details Power M	Events lanagement	
(intel)	Power Saver a	nd Wake on LAN	Options		
✓ Respond	to ARP requests to NS requests w ficient Ethernet	without waking syst ithout waking syst		^ ~

Respond to ARP requests without waking system Sets the adapter to respond to ARP requests without waking the system from sleep or hibernate. The system can remain in sleep or hibernate mode and still maintain its network presence.					
OK Cancel					

Magic Packet

The magic packet is a broadcast frame containing anywhere within its payload 6 bytes of

all 255 (FF FF FF FF FF FF in hexadecimal), followed by sixteen repetitions of the target computer's 48-bit MAC address. For example, NIC's 48-bit MAC Address is 78h D0h 04h 0Ah 0Bh 0Ch DESTINATION SOURCE MISC FF FF FF FF FF FF 78 D0 04 0A 0B 0C MISC CRC

Ethernet 1 Properties		×

There are some free tools available on Internet that can be used to send a magic packet. Please refer to the following link to understand more about <u>Magic Packet</u>.

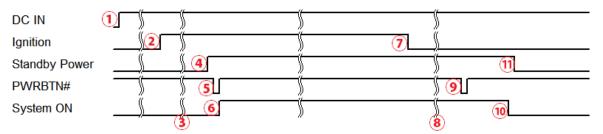

3.7 Ignition Power Control

The ignition power control module for in-vehicle applications is a MCU-based implementation that monitors the ignition signal and reacts to turn on/off the system according to predefined on/off delay. Its built-in algorithm supports other features such as ultra-low power standby, battery-low protection, system hard-off, etc. In this section, we'll illustrate the principle of ignition power control and operation modes.

3.7.1 Principles of Ignition Power Control

The basic concept of ignition power control module is to control the timing correlation between ignition signal and system power status. A typical timing correlation is described in following diagram.

- When DC power is supplied to the system, MCU starts to periodically detect ignition signal. Note that only MCU is working at this moment and the overall power consumption is less than 2 mW.
- 2. Ignition signal is active (both 12VDC and 24VDC ignition signals are accepted).
- 3. MCU starts to count a pre-defined power-on delay.
- Once power-on delay expired, MCU turns on necessary standby power for the system (3.3VSB & 5VSB).
- 5. A PWRBTN# pulse is then issued to turn on the system (equivalent to one pressing the power button on the front panel).
- 6. The system is booting and becomes operational.
- 7. After a period of time, the ignition signal becomes inactive.
- 8. MCU starts to count a pre-defined power-off delay.
- Once power-off delay expired, another PWRBTN# pulse is issued to perform a soft-off for the system (ex. a normal shutdown process for Windows system).
- 10. The system is completely shut down.
- 11.As MCU detects system is off, it turns off the standby power for the system, and operates in low power mode again (< 2mW power consumption).

3.7.2 Additional Features of Ignition Power Control

In addition to the typical timing correlation, the ignition power control module offers additional features to provide additional reliability for in-vehicle applications.

1. Low battery detection

The ignition power control module continuously monitors the voltage of DC input when the system is operational. If input voltage is less than 9V (for 12VDC input) or less than 18V (for 24VDC input) over a 60-second duration, it will shut down the system automatically.

2. Guarded power-on/ power-off delay duration

If ignition signal goes inactive during the power-on delay duration, the ignition power control module will cancel the power-on delay process and go back to idle status. Likewise if ignition signal goes active during the power-off delay duration, the ignition power control module will cancel the power-off delay process and keep the system running.

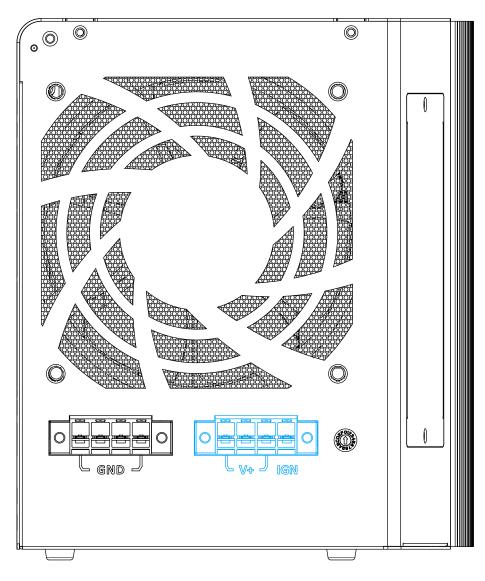

3. System hard-off

In some cases, system may fail to shutdown via a soft-off operation due to system/ application halts. The ignition power control module offers a mechanism called "hard-off" to handle this unexpected condition. By detecting the system status, it can determine whether the system is shutting down normally. If not, the ignition power control module will force cut-off the system power 10 minutes after the power-off delay duration.

4. Smart off-delay

The ignition power control module offers two modes (mode 13 & mode 14) which have very long power-off delay duration for applications require additional off-line time to process after the vehicle has stopped. In these two modes, the ignition power control module will automatically detect the system status during the power-off delay duration. If the system has shutdown (by the application software) prior to power-off delay expiring, it will cut off the system power immediately to prevent further battery consumption.

3.7.3 Wiring Ignition Signal

To have ignition power control for in-vehicle usage, you need to supply IGN signal to the system. The IGN input is located on the 4-pin pluggable terminal block (shared with DC power input). Below is the typical wiring configuration for in-vehicle applications.

- 1. Connect car Battery+ line (12V for sedan, 24V for bus/truck) to V+.
- 2. Connect car Batter-/ GND line to GND.
- 3. Connect ACC line to IGN.

Please make sure your DC power source and IGN signal share the same ground.

IGN input accepts 8~48VDC. Supply a voltage higher than 48VDC may damage the system.

3.7.4 Configure your Windows system

When applying ignition power control to your system, please make sure you've configured your Windows system to initiate a shutdown process when pressing the power button. By default, Windows 7/ 8/ 10 goes to sleep (S3) mode when power button is pressed. As sleep (S3) is not a complete shutdown behavior, the ignition control function does not recognize the finish of a normal shut down process and thus users will encounter a system hard-off (power cut-off after 10 minutes). Please configure "When I press the power button" to "Shut down" in your Windows system settings.

Power button settings

When I press the power button:

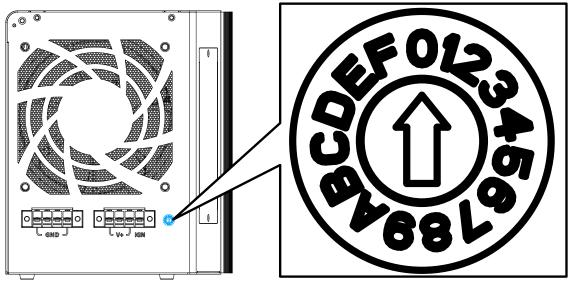

Shut down	
Do nothing	
Sleep	
Hibernate	
Shut down	

3.7.5 Operation Modes of Ignition Power Control

You can use the rotary switch to configure the operation mode. The system offers 16 (0~15) operation modes with different power-on/power-off delay configurations.

The ignition control module is also BIOS-configurable. When rotary switch is set to mode 15 (0xF), the ignition power control is set to executed according to parameters configured in BIOS setup menu, which allows richer combination of power-on/ power-off delay and more detailed control parameters.

Mode 0

Mode 0 is the ATX mode without power-on and power-off delay. User can only use the power button on the front panel to turn on or turn off the system.

Mode	Power-on Delay	Power-off Delay	Hard-off Timeout
0	N/A	N/A	N/A

Mode 1

Mode 1 is AT mode without power-on and power-off delay. The system automatically turns on when DC power is applied. A retry mechanism is designed to repeat the power-on cycle if the system fails to boot up.

Mode	Power-on Delay	Power-off Delay	Hard-off Timeout
1	N/A	N/A	N/A

• Mode 2

Mode 2 is designed to have a very minor power on/ off delay of 160ms for applications that requires the system to start up almost at the same as the rest of the equipment it is working in collaboration with.

Mode	Power-on Delay	Power-off Delay	Hard-off Timeout
2	160ms	160ms	10 minutes

• Mode 3 ~ Mode 12

Mode	Power-on Delay	Power-off Delay	Hard-off Timeout	
3	10 seconds	10 seconds	10 minutes	
4	10 seconds	1 minute	10 minutes	
5	10 seconds	5 minutes	10 minutes	
6	30 seconds	1 minute	10 minutes	
7	30 seconds	5 minutes	10 minutes	
8	30 seconds	10 minutes	10 minutes	
9	3 minutes	1 minute	10 minutes	
10 (A)	3 minutes	10 minutes	10 minutes	
11 (B)	3 minutes	30 minutes	10 minutes	
12 (C)	10 minutes	30 minutes	10 minutes	

Mode 3 ~ Mode 12 have various power-on delay and power-off delay. Each mode supports a hard-off timeout of 10 minutes.

• Mode 13 (D) / Mode 14 (E)

Mode 13 and Mode 14 are ignition power control modes with very long power-off delay. Both modes support the feature of "smart off-delay", which automatically detect system status during power-off delay duration and cut off system power if system is off in prior to power-off delay expired.

Mode	Power-on Delay	Power-off Delay	Hard-off Timeout
13 (D)	30 seconds	2 hours	10 minutes
14 (E)	3 minutes	2 hours	10 minutes

[BIOS POST Check]

	-
	This option secures a boot-to-OS operation. If the system is
	failed to boot to OS (e.g. disk failure or no bootable device)
Enabled	within 60 seconds, ignition control module will cut off system
	power and retry another power on cycle.
Disabled	BIOS POST check is skipped.

Nuvo-8108GC

[Power On Delay]

Specifies the power-on delay duration. Once IGN signal goes active and sustains for the duration of power-on delay, ignition control module turns on system power and boot up the system.

[Power Off Delay]

Specifies the power-off delay duration. Once IGN signal goes inactive and sustains for the duration of power-off delay, ignition control module performs system shutdown (soft-off) and then cut off system power.

[Hard-off Timeout]

Specifies system hard-off timeout. Once system failed to normally shutdown via a soft-off operation due to system/application halts (e.g. Windows BSOD), ignition control module can compulsively cut off system power after the given hard-off timeout.

[Battery Voltage]

Specifies the battery voltage of the vehicle where System VTC is deployed. Typically it's 12 VDC for sedan and 24 VDC for bus/truck.

[Low Battery Threshold]

When system is running, ignition control module continuously monitors the battery voltage. Once the battery voltage is lower than the specified threshold, it performs system shutdown (soft-off) and cut off system power to prevent battery drain-out. You should specify the low battery threshold according to the given battery voltage.

Press F10 to "Save Changes and Exit". The ignition control module will be reset and operate according to parameters configured in BIOS setup menu.

4 System Configuration

4.1 BIOS Settings

The system is shipped with factory-default BIOS settings meticulously programmed for optimum performance and compatibility. In this section, we'll illustrate some of BIOS settings you may need to modify. Please always make sure you understand the effect of change before you proceed with any modification. If you are unsure of the function you are changing, it is recommended to change one setting at a time to see its effect(s).

Not all BIOS settings will be discussed in this section. If a particular setting/ function you are after requires specific BIOS settings but is not discussed in this section, please contact Neousys Technical Support staff.

4.1.1 COM Port Configuration

The system's <u>COM1/ COM2</u> ports support RS-232 (full-duplex), RS-422 (full-duplex) and RS-485 (half-duplex) mode. You can set the COM1 operating mode via BIOS settings. Another option in BIOS called "*Slew Rate*" defines how sharp the rising/falling edge is for the output signal of COM1. For long-distance RS-422/ 485 transmission, you may set the "*Slew Rate*" option as "High" to improve signal quality. For RS-422/485 communication, the "*RS-422/ 485 Termination*" option determines whether to enable/disable internal termination of RS-422/485 transceiver according to your wiring configuration (e.g. with or without external termination).

	Nuvo-8	108GC Series Setup Utility

F1 Help	1/1 Select Item	F5/F6 Change Values
Esc Exit	←/→ Select Item	Enter Select 🕨 SubMenu

To set COM port operating mode:

- 1. Press F2 when the system boots up to enter the BIOS setup utility.
- 2. Go to [Advanced] \rightarrow [Peripheral Configuration].
- 3. Set the [Set COM1 Mode as] option to the desired mode.
- 4. Once set, press **F10** to save setting and exit.

4.1.2 COM Port High Speed Mode

The high speed mode of each COM port effectively allows for the port's baud rate generator to operate at 8x the speed with an effective baud rate of 921,600 bps (115,200 x 8). Please refer to the following instructions on how to enable the high speed mode for your COM port (COM1 used as an example).

Advanced		Nuvo-8108GC	Series Setup Utility

COM2 HS Mode Set COM2 as Slew Rate RS-422/485 Termination		<enabled> <disabled> <rs-232> <low> <disabled></disabled></low></rs-232></disabled></enabled>	
HD Audio			HS Mode Disabled Enabled
F1 Help	1/↓ Select	ltem	F5/F6 Change Values
Esc Exit	+/+ Select	Item	Enter Select ► SubMenu

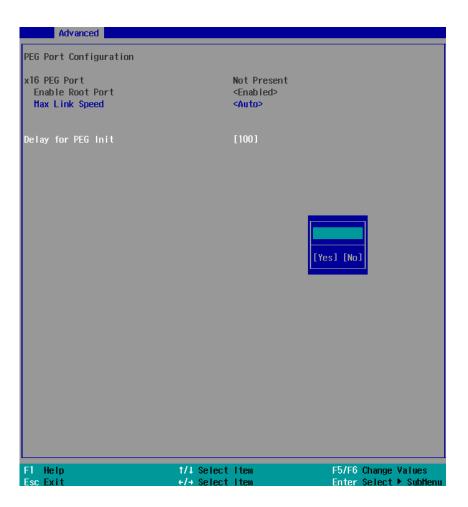

To set COM port high speed mode:

- 1. Press **F2** when the system boots up to enter the BIOS setup utility.
- 2. Go to [Advanced] > [Peripheral Configuration].
- 3. Enable or set the **[Set COM1 Mode as]** option to the desired mode.
- 4. Highlight **[HS Mode]** and press ENTER to bring up options, highlight **[Enable]** and press ENTER.
- 5. Once set, press **F10** to save setting and exit.

4.1.3 Delay for PEG Initialization

This setting offers delay in milliseconds for PEG port initialization and PCI enumeration. By increasing the delay value, it may eliminate compatibility issue(s) with some PCIe add-on cards.

To set PEG delay in milliseconds:

- 1. When system boots up, press F2 to enter BIOS setup utility.
- Go to [Advanced] > [System Agent (SA) Configuration] > [PEG Port Configuration] > [Delay for PEG Init] and press ENTER.
- 3. A small window appears and you may enter a maximum delay value of up to 30,000ms.
- 4. When done, press F10 to "Exit Saving Changes"

4.1.4 SATA Configuration

The SATA controller of your system supports two (2) operating modes: AHCI and Intel RST Premium With Intel Optane System Acceleration mode. The AHCI mode, which exposes SATA's advanced capabilities such as hot swapping and native command queuing, is supported in several later version of operating systems. The Intel RST Premium With Intel Optane System Acceleration mode allows the user to greatly accelerate SATA hard drive read/ write speeds by installing an Optane memory into the M.2 slot. Please refer to the section "Intel RST Premium With Intel Optane System Acceleration" for details.

F1 Help Esc Exit	1/↓ Select Item +/→ Select Item	F5/F6 Change Values Enter Select ► SubMenu	F9 Setup Defaults F10 Save and Exit

Recommended SATA controller mode settings:

- If you're using Windows Vista, Windows 10, or Linux with kernel 4.15.18 or later, you can select AHCI mode for better performance.
- If you are looking for faster hard drive read/ write performance, please install an SSD (M.2, mPCIe, SATA) or install an Intel[®] Optane[™] memory for hard drive acceleration.

To set SATA controller mode:

- 1. When system boots up, press F2 to enter BIOS setup utility.
- 2. Go to [Advanced] > [SATA Configuration].
- 3. Highlight the SATA, mSATA or M.2 port you wish to set and press ENTER to bring up setting options. Scroll to and highlight the setting you wish to set and press ENTER.

4.1.5 Fan Control Configuration

The fan control configuration allows users to set the fan operation mode to auto or fixed speeds operation. The auto mode configuration also offers minimum temperature setting to trigger the fan and the maximum temperature setting before the fan operates at 100% rotation speed.

To set Fan Control Configuration to Auto mode:

- 1. When system boots up, press F2 to enter BIOS setup utility.
- 2. Go to [Advanced] > [Fan Control Configuration] and press ENTER.
- 3. To set auto fan control, highlight [Fan Control Mode] and press ENTER, highlight [Auto]

- 4. Use the up/ down arrow keys to highlight Fan Start Trip Point or Fan Max. Trip Point and press ENTER, a window appears and you may enter the temperature in degree Celsius.
 - Fan Start Trip Point: The minimum temperature which the fan being to operate
 - Fan Max. Trip Point: The maximum temperature where the fan begins to operate at 100% rotation speed

5. When done, press F10 to "Exit Saving Changes".

To set Fan Control Configuration to Fixed Speed mode:

- 1. When system boots up, press F2 to enter BIOS setup utility.
- 2. Go to [Advanced] > [Fan Control Configuration] and press ENTER.
- 3. To set auto fan control, highlight [Fan Control Mode] and press ENTER, highlight [Fixed Speed].

- 4. Highlight **[Fan Speed]** and press ENTER.
- 5. A window appears and you may use the up/ down arrow keys to select between 20~100% as your fixed fan rotation speed.

4.1.6 **TPM** Availability

Trusted Platform Module (TPM) is a hardware-based cryptoprocessor to secure hardware by integrating cryptographic keys into devices. The system is designed with on-board TPM 2.0 module. As TPM 2.0 requires 64-bit Windows 7/8/10 with UEFI boot mode, it is disable in BIOS by default. For customers who want to utilize TPM feature, you will need to enable TPM in BIOS as well as install Windows with UEFI mode.

To set "Power On after Power Failure" option:

- 1. When system boots up, press F2 to enter BIOS setup utility.
- 2. Go to [Power] > [Power On after Power Failure].
- 3. Scroll down to highlight **[Power On after Power Failure]**, press ENTER to bring up setting options, S0 Power On or S5 Power Off, and press ENTER to select the setting.
- 4. Press F10 to "Exit Saving Changes".

4.1.8 **Power & Performance (CPU SKU Power Configuration)**

The system supports various 8th-Gen Coffee Lake LGA1151 CPUs. A unique feature, "**SKU Power Config**" is implemented in BIOS to allow users to specify user-defined SKU power limit. Although the system is designed to have best thermal performance with CPUs of 35W TDP, you can install a 65W CPU and limit its SKU power (to 35W) to obtain more computing power. This feature gives you the flexibility of CPU selection and great balance between computing power and operating temperature range.

To configure the CPU SKU power limit:

- 1. When the system boots up, press F2 to enter BIOS setup utility.
- 2. Go to [Power] \rightarrow [Power & Performance].
- 3. Select a proper value of SKU power limit for [SKU Power Config] option.
- 4. Press F10 to "Exit Saving Changes".

4.1.9 Wake on LAN Option

Wake-on-LAN (WOL) is a mechanism which allows you to turn on your System series via Ethernet connection. To utilize Wake-on-LAN function, you have to enable this option first in BIOS settings. Please refer "<u>Powering On Using Wake-on-LAN</u>" to set up the system.

To enable/ disable "Wake on LAN" option:

- 1. When system boots up, press F2 to enter BIOS setup utility.
- 2. Go to [Power]> [Wake on LAN].
- 3. Press ENTER to bring up setting options, scroll to the setting you desire and press ENTER to set.
- 4. Press F10 to "Exit Saving Changes.

4.1.10 Boot Menu

The Boot menu in BIOS allows you to specify the system's boot characteristics by setting bootable device components (boot media) and method. Or, you may press F12 upon system start up and select a device you wish boot from.

4.1.11 Boot Type (Legacy/ UEFI)

The system supports both Legacy and Unified Extensible Firmware Interface (UEFI) boot modes. UEFI is a specification proposed by Intel to define a software interface between operating system and platform firmware. Most modern operating systems, such as Windows 7/8/10 and Linux support both Legacy and UEFI boot modes. The Legacy boot mode uses MBR partition for disk and VBIOS for video initialization, the UEFI boot mode uses GPT partition which supports greater than 2TB partition size and GOP driver for faster video initialization.

4. Once set, press **F10** to save setting and exit.

4.1.13 Watchdog Timer for Booting

The watchdog timer secures the boot process by means of a timer. Once the timer expires, a reset command is issued to initiate another booting process. There are two options in BIOS menu, "*Automatically after POST*" and "*Manually after Entering OS*". When "*Automatically after POST*" is selected, the BIOS automatically stops the watchdog timer after POST (Power-On Self Test) OK. When "*Manually after Entering OS*" is selected, the user must stop the watchdog timer once booted into the OS. This guarantees the system can always boot into the OS, otherwise another booting process will be initiated. For information about programming watchdog timer, please refer to <u>Watchdog Timer & Isolated DIO</u>.

To set the watchdog timer for boot in BIOS:

- 1. When system boots up, press F2 to enter BIOS setup utility.
- 2. Go to [Boot] menu.
- 3. Disable or select timeout value for [WDT for Booting] option.
- 4. Once you give a timeout value, the **[WDT Stop Option]** option appears. You can select *"Automatically after POST"* or *"Manually after Entering OS"*.
- 5. Press F10 to "Exit Saving Changes.

4.1.14 Legacy/ UEFI Boot Device

When you wish to set a designated boot device, you may set it as the first device to boot in Legacy setting. Or if you wish to manually select a Legacy boot device, you may do so by pressing F12 when the system boots up.

To select boot order for devices in Legacy Boot Device:

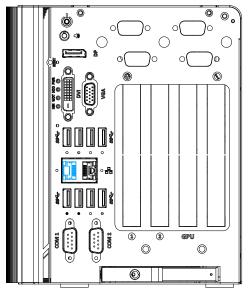

- 1. When system boots up, press F2 to enter BIOS setup utility
- Go to [Boot] > [Legacy], you can choose the type of device to list by selecting "By Device or By Device Type".
- 3. Highlight the device you wish to make boot order changes to and press F5/ F6 or +/ to change device boot order.

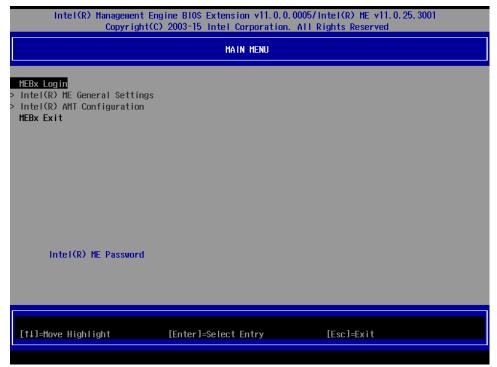

4.2 AMT Configuration

Intel® AMT (Active Management Technology) is a hardware-based technology for remotely managing target PCs via Ethernet connection. The system supports AMT function via its Ethernet port implemented with Intel I219-LM. Prior to using the AMT function to remotely control the system, you need to configure AMT password and network settings.

1. Connect Ethernet cable tol219-LM Ethernet port(indicated in blue).

2. When the system boots up, press F10 to enter the MEBx configuration menu.

3. Highlight MEBx Login and press Enter, a prompt will appear asking for password. The default password is "admin". For further MEBx configuration details, please refer to Intel® MEBX User Guide.

4.3 RAID Configuration

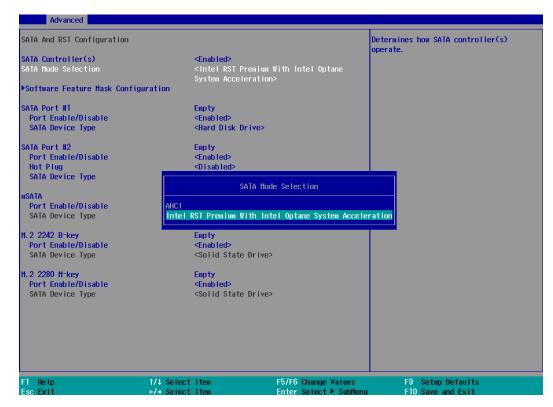

To set up a RAID 0 or 1 volume in Legacy or UEFI mode, you need to have at least two hard drives or SSDs installed. The system supports RAID configurations in RAID 0 (striping) or RAID 1 (mirror) mode. Users can select the configuration that best suit their needs with RAID 0 (striping) mode offering better hard drive read/ write performances while RAID 1 (mirror) offers better data security.

Please back up hard drive data before you create or modify RAID volume(s) as the process may cause irreversible data deletion. When creating a RAID volume, it is also recommended to use hard drives from the same batch (same brand, model, capacity, rpm rate, etc.) to avoid performance or capacity allocation issues.

4.3.1 Legacy Mode RAID Configuration

To set up RAID configuration, you need to pre-configure the SATA mode setting in the BIOS. Please refer to the following steps:

- 1. When system boots up, press **F2** to enter BIOS setup utility.
- Go to [Advanced] > [SATA And RST Configuration] > [SATA Mode Selection] > highlight [Intel RST Premium With Intel Optane System Acceleration] and press ENTER.

3. Go to [Boot] > highlight [Legacy Boot Type] and press ENTER to set boot type.

5 OS Support and Driver Installation

5.1 Operating System Compatibility

The system supports most operating system developed for Intel® x86 architecture. The following list contains the operating systems which have been tested by Neousys Technology.

- Microsoft Window 10 (x64)
- Fedora 29**
- Ubuntu 16.04.5 LTS** & Ubuntu18.04.0 LTS**

NOTE

For other Linux OS, Linux kernel should upgrade to 4.15.18.

*For Linux system, user may need to manually compile and install the driver for Intel graphics or I210 GbE controller if the driver is not embedded in kernel. You can visit Intel website for further information.

** For distributions, graphics driver and RAID function may not be completely implemented in its kernel. You may encounter restrictions when using these features, such as triple independent display and RAID. For optimum operation, it is the users' responsibility to manually check for new drivers and upgrades!

Neousys may remove or update operating system compatibility without prior notice. Please contact us if your operating system of choice is not on the list.

5.2 Driver Installation

The system comes with a "Drivers & Utilities" DVD that offers "one-click" driver installation process. It automatically detects your Windows operating system and installs all necessary drivers for you system with a single click.

5.2.1 Install Drivers Automatically

The system comes with a "Drivers & Utilities" DVD that offers "one-click" driver installation process. It automatically detects your Windows operating system and installs all necessary drivers for you system with a single click.

To install drivers automatically, please refer to the following procedures.

 Insert the "Drivers & Utilities" DVD into a USB DVD-drive connect to your system. A setup utility launches and the following dialog appears.

Click on "**Automatic Driver Installation**" and the setup utility will automatically detect your Windows operating system and install all necessary drivers. The installation process takes about 6~8 minutes depending on your Windows version. Once driver installation is done, the setup utility reboots your Windows and you may begin using your system.

5.2.2 Install Drivers Manually

You can also manually install each driver for the system. Please note when installing drivers manually, you need to install the drivers in the following sequence mentioned below.

Windows 10 (x64)

The recommended driver installation sequence is

- 1. Chipset driver (x:\Driver_Pool\Chipset_10_APL\Win_ALL\SetupChipset.exe)
- 2. Graphics driver (x:\Driver_Pool\Graphics_SKL_APL\Win_7_8_10_APL_64\Setup.exe)
- 3. Audio driver (x:\Driver_Pool\Audio_ALC262\Win_ALL_64\Setup.exe)
- LAN driver
 (x:\Driver_Pool\GbE_I210_I350\Win_ALL_64\APPS\PROSETDX\Win10_x64\DxSetup.e xe)
- 5. ME driver (x:\Driver_Pool\ME_10_Series\Win_ALL_AMT\SetupME.exe)

5.3 Driver Installation for Watchdog Timer Control

Neousys provides a driver package which contain function APIs for Watchdog Timer control function. You should install the driver package (WDT_DIO_Setup.exe) in prior to use these functions. Please note that you must install WDT_DIO_Setup_v2.2.9.x or later versions.

Windows 10 (x64)

Please execute the driver setup program in the following directory.

x:\Driver_Pool\WDT_DIO\Win7_8_64\WDT_DIO_Setup_v2.2.9.x(x64).exe

Windows 10 (WOW64)

Please execute the driver setup program in the following directory.

x:\Driver_Pool\WDT_DIO\Win7_8_WOW64\WDT_DIO_Setup_v2.2.9.x(wow64).exe

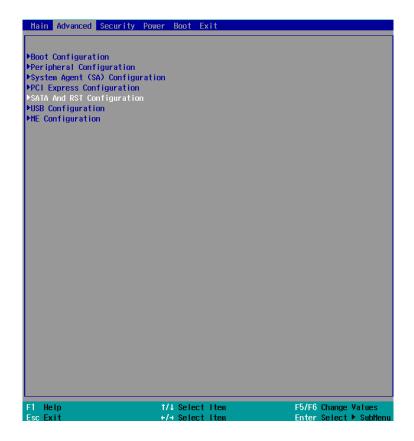

5.4 Intel[®] Optane[™] Memory BIOS Setup and Driver Installation

The system is compatible with Intel[®] Rapid Storage Technology that supports the installation of Intel[®] OptaneTM memory to significantly boost traditional hard disk drive read and write performances. Intel® OptaneTM memory is Intel® RST's latest system acceleration solution featuring a dual-media/disk combination (ultrafast media for file and block caching + slow media for storage capacity) that is presented to the host OS as a single SSD. The ultrafast media utilizes PCIe NVMe SSDs that are based on Intel® OptaneTM technology with read speed of up to 3000Mb/ sec and write speed of up to 2000Mb/ sec.

To setup Intel[®] Optane[™] memory, please perform the following steps:

- 1. Press the power button to startup your system (please restart if your system is already up and running) and press F2 to enter BIOS.
- 2. Go to "Advanced > SATA And RST Configuration".

3. Go to "SATA Mode Selection", press the Enter key to bring up options, select "Intel RST Premium With Intel Optane System Acceleration" and press ENTER to select the option.

Intel® Installation Framework	
Intel® Optane™ Memory Step: 5/6	(intel)
Please wait while the product is being installed.	
Intel Corporation	

9. When done, click on "Finish" and restart the system.

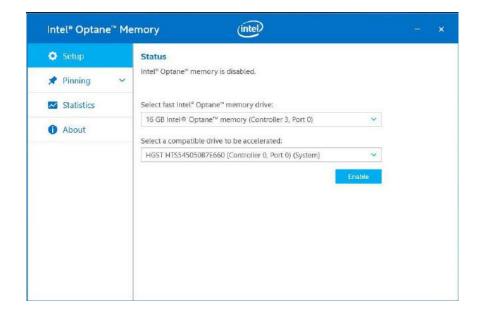

Intel®	Installation Framework	×
Intel Step:	® Optane™ Memory 6/6	(intel)
Ø	You have successfully installed the following product:	
	Intel® Optane™ Memory	
	Please restart your PC to implement these changes. Would you like to restance?	art your PC
	Yes, I want to restart this computer now.	
	\bigcirc No, I will restart this computer later.	
	Note: A restart (not 'Shut down') is required to complete the installation pro	ocess,
Intel Co	rporation	Finish

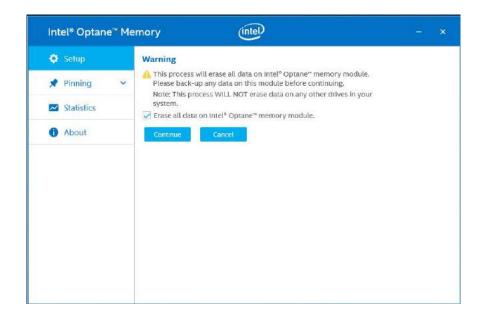

10. Upon system restart, the following initialization screen will appear. Click on Next to continue.

 In the Setup section, you will see your Intel® Optane[™] memory drive and compatible drive(s) that can be accelerated. Click on the downward arrow to bring up a selection of drives to be accelerated. Click on "Enable" when ready.

12. The data backup warning will appear, please backup any data you may have stored on your Intel® Optane[™] memory module before proceeding. Check the box "Erase all data on Intel® Optane[™] memory module" and click on Continue.

 When the Intel® Optane[™] memory module has been enabled, the installation window and a notification window at the bottom right corner will prompt you to restart the system.

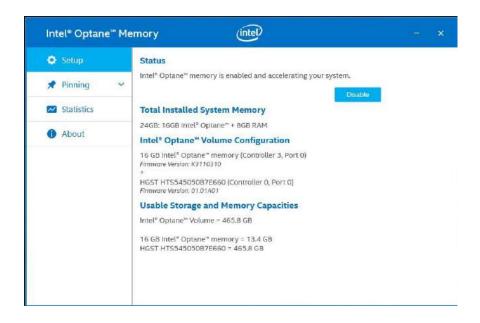

Intel® Optane™ Memory	×
Operation completed	
Please restart your computer to comp	lete the process.
	Restart

 Upon system restart, a successful enablement message will appear to indicate the Intel® Optane[™] memory module has been enable successfully.

15. Once enabled, the RST software Setup section should show your configuration information.

Appendix A Using WDT & DIO

The watchdog timer (WDT) function to ensure reliable system operation. The WDT is a hardware mechanism to reset the system if the watchdog timer is expired. Users can start the WDT and keeping resetting the timer to make sure the system or program is running. Otherwise, the system shall be reset.

In this section, we'll illustrate how to use the function library provided by Neousys to program the WDT functions. Currently, WDT driver library supports Windows 10 x64 and WOW64 platform. For other OS support, please contact Neousys Technology for further information.

Installing WDT_DIO Library

The WDT_DIO function library is delivered in the form of a setup package named **WDT_DIO_Setup.exe**. In prior to program WDT, you should execute the setup program and install the WDT library. Please use the following WDT_DIO_Setup packages according to your operating systems and application.

- For Windows 10 64-bit OS with 64-bit application (x64 mode), please install WDT_DIO_Setup_v2.2.9.11(x64).exe or later version.
- For Windows 10 64-bit OS with 32-bit application (WOW64 mode), please install WDT_DIO_Setup_v2.2.9.11(wow64).exe or later version.

WDT and DIO Library Installation

To setup WDT & DIO Library, please follow instructions below.

1. Execute **WDT_DIO_Setup.2.2.9.11.exe**. and the following dialog appears.

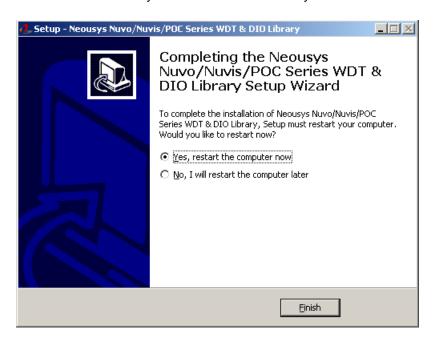

🦺 Setup - Neousys Nuvo/Nuv	ris/POC Series WDT & DIO Library
	Welcome to the Neousys Nuvo/Nuvis/POC Series WDT & DIO Library Setup Wizard
	This will install Neousys Nuvo/Nuvis/POC Series WDT & DIO Library version Ver. 2.0 on your computer.
	It is recommended that you close all other applications before continuing.
	Click Next to continue, or Cancel to exit Setup.
	Cancel

 Click "Next >" and specify the directory of installing related files. The default directory is C:\Neousys\WDT_DIO.

🥠 Setup - Neousys Nuvo/Nuvis/POC Series WDT & DIO Library		
Select Destination Location Where should Neousys Nuvo/Nuvis/POC Series WDT & DIO Library be installed?		
Setup will install Neousys Nuvo/Nuvis/POC Series WDT & DIO Library into the following folder.		
To continue, click Next. If you would like to select a different folder, click Browse.		
C:\Weousys\WDT_DIO Browse		
At least 5.6 MB of free disk space is required.		
< <u>B</u> ack <u>N</u> ext > Cancel		

 Once the installation has finished, a dialog will appear to prompt you to reboot the system. The WDT & DIO library will take effect after the system has rebooted.

4. When programming your WDT or DIO program, the related files are located in

WDT Functions

InitWDT

	1
Syntax	BOOL InitWDT(void);
Description:	Initialize the WDT function. You should always invoke InitWDT() before set or start watchdog timer.
Parameter	None
Return Value	TRUE: Successfully initialized
	FALSE: Failed to initialize
Usage	BOOL bRet = InitWDT()

SetWDT

	1
Syntax	BOOL SetWDT(WORD tick, BYTE unit);
Description	Set timeout value and unit for watchdog timer. When InitWDT()
Description	Set timeout value and unit for watchdog timer. When mitty DT()
	is invoked, a default timeout value of 255 seconds is assigned.
Parameter	tick
	WORD value (1 ~ 65535) to indicate timeout ticks.
	unit
	BYTE value (0 or 1) to indicate unit of timeout ticks.
	0 : unit is minute
	1: unit is second
Return Value	If value of unit is correct (0 or 1), this function returns TRUE,
	otherwise FALSE.
Usage	WORD tick=255;
	BYTE unit=1; //unit is second.
	BOOL bRet = SetWDT(tick, unit); //timeout value is 255
	seconds

StartWDT

Syntax	BOOL StartWDT(void);
Description	Starts WDT countdown. Once started, the WDT LED indicator will begin blinking. If ResetWDT() or StopWDT is not invoked before WDT countdowns to 0, the WDT expires and the system resets.
Parameter	None
Return Value	If the timeout value is given in correct format (WDT started), this function returns TRUE, otherwise FALSE
Usage	BOOL bRet = StartWDT()

ResetWDT

Syntax	BOOL ResetWDT(void);
Description	Reset the timeout value to the value given by SetWDT().If ResetWDT() or StopWDT is not invoked before WDT
	countdowns to 0, the WDT expires and the system resets.
Parameter	None
Return Value	Always returns TRUE
Usage	BOOL bRet = ResetWDT()

StopWDT

Syntax	BOOL StopWDT(void);
Description	Stops the countdown of WDT. When WDT has stopped, the WDT LED indicator stops blinking.
Parameter	None
Return Value	Always returns TRUE
Usage	BOOL bRet = StopWDT()
