Legal Information

All Neousys Technology Inc. products shall be subject to the latest Standard Warranty Policy

Neousys Technology Inc. may modify, update or upgrade the software, firmware or any accompanying user documentation without any prior notice. Neousys Technology Inc. will provide access to these new software, firmware or documentation releases from download sections of our website or through our service partners.

Before installing any software, applications or components provided by a third party, customer should ensure that they are compatible and interoperable with Neousys Technology Inc. product by checking in advance with Neousys Technology Inc.. Customer is solely responsible for ensuring the compatibility and interoperability of the third party's products. Customer is further solely responsible for ensuring its systems, software, and data are adequately backed up as a precaution against possible failures, alternation, or loss.

For questions in regards to hardware/ software compatibility, customers should contact Neousys Technology Inc. sales representative or technical support.

To the extent permitted by applicable laws, Neousys Technology Inc. shall NOT be responsible for any interoperability or compatibility issues that may arise when (1) products, software, or options not certified and supported; (2) configurations not certified and supported are used; (3) parts intended for one system is installed in another system of different make or model.

Declaration of Conformity

FCC

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at own expense.

CE

The product(s) described in this manual complies with all applicable European Union (CE) directives if it has a CE marking. For computer systems to remain CE compliant, only CE-compliant parts may be used. Maintaining CE compliance also requires proper cable and cabling techniques.

All other names, brands, products or services are trademarks or registered trademarks of their respective owners.

Safety Precautions

- Read these instructions carefully before you install, operate, or transport the system.
- Install the system or DIN rail associated with, at a sturdy location
- Install the power socket outlet near the system where it is easily accessible
- Secure each system module(s) using its retaining screws
- Place power cords and other connection cables away from foot traffic. Do not place items over power cords and make sure they do not rest against data cables
- Shutdown, disconnect all cables from the system and ground yourself before touching internal modules
- Ensure that the correct power range is being used before powering the device
- Should a module fail, arrange for a replacement as soon as possible to minimize down-time
- If the system is not going to be used for a long time, disconnect it from mains (power socket) to avoid transient over-voltage

Battery Warning

- Batteries are at risk of exploding if incorrectly installed
- Do not attempt to recharge, force open, or heat the battery
- Replace the battery only with the same or equivalent type recommended by the manufacturer

Service and Maintenance

- ONLY qualified personnel should service the system
- Shutdown the system, disconnect the power cord and all other connections before servicing the system
- When replacing/ installing additional components (expansion card, memory module, etc.), insert them as gently as possible while assuring connectors are properly engaged

ESD Precautions

- Handle add-on module, motherboard by their retention screws or the module's frame/ heat sink. Avoid touching the PCB circuit board or add-on module connector pins
- Use a grounded wrist strap and an anti-static work pad to discharge static electricity when installing or maintaining the system
- Avoid dust, debris, carpets, plastic, vinyl and styrofoam in your work area.
- Do not remove any module or component from its anti-static bag before installation

Restricted Access Location

The controller is intended for installation only in the certain environment where both these condition apply:

- Access can only be gained by SERVICE PERSONS or by USERS who have been instructed about the reasons for the restrictions applied to the location and about any precautions that shall be taken
- Access is through the use of a TOOL or lock and key, or other means of security, and is controlled by the authority responsible for the location

About This Manual

This user manual introduces Neousys Technology SEMIL-2000 series, an IP69K waterproof extreme-rugged fanless GPU computer that supports NVIDIA® Tesla L4 while featuring workstation-grade Intel® chipset and offers excellent passive thermal performance with M12 connectors for robust and cost-effectiveness.

Model No. Description			
SEMIL-2000	19" 2U half-rack mount IP69K waterproof computer supporting Intel® 14th / 13th/		
	12th-Gen Core™ processor with 2x M12 10GbE and 4x M12 PoE+ ports

Revision History

Version	Date	Description
1.0	Mar. 2024	Initial release

1 Introduction

SEMIL-2000GC is an extreme-rugged IP69K dustproof and waterproof edge AI platform in a 2U 19" rack-mount form factor. SEMIL- 2000GC incorporates Neousys' best-in-class thermal design to ensure fanless maximum GPU performance in wide range -40°C to 70°C temperatures. The system is also integrated with an NVIDIA® L4 GPU that offers up to 2.5 times the performance over Tesla T4.

Powered by Intel's 14th/ 13th/ 12th-Gen platform, SEMIL-2000GC benefits from Intel® 7 photolithography with performance and efficient core hybrid performances while supporting up to 64 GB DDR5 memory.

SEMIL-2000GC adopts a corrosion-proof stainless steel and aluminum chassis to counteract moisture and salinity. By utilizing M12 connectors, it offers extremely rugged connections in shock and vibration environments with two CAN bus 2.0 with SocketCAN driver, two USB 3.2, seven Ethernet (including two 10GbE), and four 802.3at PoE+ ports to supply 25.5W of power per port to connected compatible devices. Internally, there is an M.2 M-key socket to support NVMe SSD and mini-PCIe sockets for extending feature sets. Additionally, SEMIL-2000GC features two 2.5" SATA SDD/ HDD accommodation, 8-48V wide-range DC input with ignition power control, and it is also in compliance with MIL-STD-810H standards.

1.1 SEMIL-2000GC Specifications

System Platform				
Processor	Supporting Intel® 13th-Gen Core™ CPU (LGA1700 socket, 65W/ 35W TDP) - Intel® Core™ i9-13900E/ i9-13900TE - Intel® Core™ i7-13700E/ i7-13700TE - Intel® Core™ i5-13500E/ i5-13400E/ i5-13500TE - Intel® Core™ i3-13100E/ i3-13100TE	Supporting Intel® 12th-Gen Core [™] CPU (LGA1700 socket, 65W/ 35W TDP) - Intel® Core [™] i9-12900E/ i9-12900TE - Intel® Core [™] i7-12700E/ i7-12700TE - Intel® Core [™] i5-12500E/ i5-12500TE - Intel® Core [™] i3-12100E/ i3-12100TE - Intel® Pentium® G7400E/ G7400TE - Intel® Celeron® G6900E/ G6900TE		
Chipset	Intel® Q670E platform controller hub			
Graphics	Integrated Intel® UHD Graphics 770	(32EU)		
Memory	Up to 64 GB DDR5 4800 SDRAM (tw	ro SODIMM slots)		
Accelerated GPU	NVIDIA® L4 GPU			
AMT	Supports Intel vPro/ AMT 16.0			
ТРМ	Supports dTPM 2.0			
I/O Interface				
	2x 10Gb Ethernet by X550-AT2 (with WoL) (M12 X-coded)			
Ethernet	4x 2.5Gb Ethernet by Intel I226-IT (PoE+) (M12 X-coded)			
	1x Gb Ethernet by Intel I219-LM (with WoL) (M12 X-coded)			
PoE+	4x IEEE 802.3at PoE+ PSE with 100 W total power budget			
CANbus	2x isolated CAN 2.0 port, supporting SocketCAN in Linux			
Serial port	2x isolated 3-wire RS-232 ports (COM1/ COM2)			
Senai port	1x isolated 3-wire RS232 (COM3) & 1x RS-422/ 485 port (COM4)			
USB port	2x Type-C USB 3.2 Gen1x1 (5Gbps) ports with screw-lock (shared DisplayPort)			
	2x USB 2.0 ports in M12 A-code			
Video port	2x Type-C USB connector supporting	DP output (shared USB3.2 Gen1x1)		
Storage Interface				
SATA HDD	2x internal SATA ports for 2.5" HDD/ S	SSD installation, supporting RAID 0/ 1		
M.2	1x M.2 2280 M key socket (PCIe Gen4x4) for NVMe SSD			
Expansion Bus				
Mini PCI-E	3x full-size mini PCI Express sockets with SIM slot			
M.2	1x M.2 2242/3052 B key socket with dual SIM slot for M.2 5G/ 4G module			
	1x M.2 2230 E key socket for Wi-Fi			
Power Supply				
DC Input	8V to 48V DC input, with reverse polarity protection (M12 L-coded)			

Ignition Control	Built-in ignition power control		
	(IGN/ GND signal via M12 L-coded connector)		
	For reference only, actual consumption may vary depending on configuration.		
	With i9-13900E with NVIDIA L4, tested GPU-burn, burn-in PL2		
Max. Power	35W mode: 192W (Max.) @ 24V		
Consumption	35W mode: 194W (Max.) @ 48V		
	65W mode: 238W (Max.) @ 24V		
	65W mode: 234W (Max.) @ 48V		
Mechanical			
Dimension	440mm (W) x 310mm (D) x 90.5mm (H) (excluding rack-mount bracket)		
Weight	12 kg		
Mounting Method Rack-mount and wall-mount			
Environmental			
Operating	With 35W CPU		
Temperature	-40°C to 70°C**		
	With CPU operating >= 65W		
	-40°C to 70°C */ ** (configured as 35W TDP mode)		
	-40°C to 60°C */ ** (configured as 65W TDP mode)		
Storage			
Temperature	-40°C to 85°C		
Humidity	10% to 90%, non-condensing		
Vibration	MIL-STD-810H, 514.8C-IV. Category 4		
Shock	MIL-STD-810H, 516.8 Procedure I		
5140	EN 50121 (EN 50155 EMC)		
EMC	CE/FCC Class A, according to EN 55032 & EN 55024		
Ingress protection	ІР69К		

* For 65W CPUs, the recommended DC input range is 18V to 48V.

** For sub-zero operating temperature, a wide temperature HDD or Solid State Disk (SSD) is required.

1.2 SEMIL-2000 Specifications

System Platform				
Processor	Supporting Intel® 13th-Gen Core™ CPU (LGA1700 socket, 65W/ 35W TDP) - Intel® Core™ i9-13900E/ i9-13900TE - Intel® Core™ i7-13700E/ i7-13700TE - Intel® Core™ i5-13500E/ i5-13400E/ i5-13500TE - Intel® Core™ i3-13100E/ i3-13100TE	Supporting Intel® 12th-Gen Core [™] CPU (LGA1700 socket, 65W/ 35W TDP) - Intel® Core [™] i9-12900E/ i9-12900TE - Intel® Core [™] i7-12700E/ i7-12700TE - Intel® Core [™] i5-12500E/ i5-12500TE - Intel® Core [™] i3-12100E/ i3-12100TE - Intel® Pentium® G7400E/ G7400TE - Intel® Celeron® G6900E/ G6900TE

2.2 SEMIL-2000GC Series Front Panel

66 6 6	
ltem	Description
<u>GbE</u>	M12 X-coded 1Gb Ethernet via Intel i219-LM
DC-in	8V to 48V DC input, with reverse polarity protection (M12 L-coded)
	The M12 X-coded 2.5Gb Ethernet ports are backward compatible with
	1GbE and offer Power over Ethernet (PoE) to provide both data
POE+	connection and electric power to devices (eg. IP camera).
0.0014/0	The CANbus 2.0 connectivity allows the system to communicate with
<u>CAN1/ 2</u>	other CAN devices
<u>COM3/ 4</u>	1x isolated 3-wire RS232 (COM3) & 1x RS-422/ 485 port (COM4)
<u>COM1/2</u>	COM 1 & 2 are isolated RS-232 ports via an M12 A-coded connector.
7USB 2.0The M12 A-coded USB 2.0 port is backward-compatible1.0.	
	The optional 10GbE is backwards compatible with 5Gb, 2.5Gb, and GbE
<u>10GbE</u>	connections.
Type-C	Time CLICP 2.2 Control (CObre) part and supports alternative mode for
USB or	Type-C USB 3.2 Gen1x1 (5Gbps) port, and supports alternative mode for
DisplayPort	DisplayPort
Power	Use this button to turn on or force shutdown the system. This button can
<u>button</u>	also be used to clear the system's CMOS.
	Item GbE DC-in 2.5GbE & PoE+ CAN1/2 COM3/4 COM1/2 USB 2.0 10GbE Type-C USB or DisplayPort Power

2.2.1 Gb Ethernet

The system offers one Gb Ethernet port implemented Intel i219. It supports Wake on LAN and is also compatible with Intel® AMT (Active Management Technology) to support advanced features such as remote SOL desktop and remote on/ off control.

Panel side

Cable connector end

Signal	M12 panel side	M12 cable connector end	Wire color

LAN P1	3	3	
LAN N1	4	4	
LAN P3	5	5	
LAN N3	6	6	
LAN N2	7	7	
LAN P2	8	8	

2.2.2 DC-IN Connector

The system accepts a wide range of DC power input from 8V to 48V with reverse polarity protection via a M12 L-coded connector. The M12 L-coded connectors offer COTS availability and ultra-rugged connection reliability when wiring DC power.

Please make sure the voltage of DC power is correct before you connect it to the system. Supplying a voltage over 48V will damage the system.

2.2.3 2.5 Gb Ethernet and PoE+ Port

The system offers 2.5Gb ports with PoE+ via M12 X-coded connectors on the front panel. Power over Ethernet (PoE) supplies electrical power and data on a CAT-5/CAT-6 Ethernet cable. Acting as a PoE PSE (Power Sourcing Equipment), compliant with IEEE 802.3at, each PoE port delivers up to 25.5W to a Powered Device (PD). PoE can automatically detect and determine if the connected device requires power or not, so it is compatible with standard Ethernet devices as well.

Each port has one dedicated PCI Express link for maximum network performance.

TXD2	8	8	3	

2.2.7 USB2.0 Port

The USB2.0 ports are implemented via native xHCI (eXtensible Host Controller Interface) controller and are backward compatible with USB 1.1 and USB 1.0 devices. Legacy USB support is also provided so you can use USB keyboard/mouse in DOS environment.

	Panel side	Cable connector end

VCC_USB	6	6		
D2-	7	7		
D2+	8	8		

2.2.8 10Gb Ethernet

The system offers two 10Gb Ethernet ports supporting Wake-on-LAN via M12 X-coded connector implemented using Intel® X550AT controller on the front panel. The port is backwards compatible with 5Gb, 2.5Gb, and Gb Ethernet connections.

LAN N3	6	6			
LAN N2	7	7			
LAN P2	8	8			

2.2.9 Type-C USB 3.2 Gen 1 Ports/ DisplayPort

The system's USB 3.2 Gen1x1 type-C port offers up to 5Gbps of data transfer bandwidth, and is implemented via the native xHCI (eXtensible Host Controller Interface) controller. The port is backward compatible with USB3.2 Gen.1 USB 2.0, USB 1.1 and USB 1.0 devices via a USB hub (not included) to connect to external devices.

xHCI driver is supported natively in Windows 10, therefore you do not need to install the xHCI driver prior to utilizing USB functions.

The USB Type-C port can also be used alternatively for DisplayPort output to support resolutions up to 4096 x 2304 (4K).

Or by plugging in a USB Type-C hub, you may use USB and DisplayPort simultaneously.

2.2.10 Power Button

The power button is a non-latched switch for ATX mode on/off operation. To turn on the system, press the power button and the PWR LED should light-up. To turn off the system, issuing a shutdown command in OS is preferred, or you can simply press the power button. To force shutdown when the system freezes, press and hold the power button for 5 seconds. Please note that there is a 5-second interval between on/off operations (i.e. once the system is turned off, there is a 5-second wait before you can power-on the system).

To clear the system CMOS using the power button, please refer to the following instructions.

- 1. Unplug the DC power cable from the system.
- 2. With the cable unplugged, press and hold the power button.
- 3. With the power button held down, reconnect the DC power cable to the system.
- 4. Continue to press and hold down the button for a further 5 seconds after connecting the DC power cable.
- 5. Release the power button to complete the clear CMOS procedure.

2.3 Internal I/Os

Installing after-sales internal modules on your own may affect its waterproof capabilities and is not recommended. If you must install internal modules after purchase, please consult your sales representative as you may need to return the system to Neousys Technology or an authorized SEMIL distributor for processing to retain waterproof capability.

In addition to connectors on the enclosure panel, the system also provides internal expansion slots such as for hard drives, mini-PCIe, and access to ignition control rotary switch.

2.3.1 mini-PCIe Expansion Slot

The system has three mini-PCIe sockets. There are plenty of off-the-shelf mini-PCIe modules with versatile capabilities. By installing a mini-PCIe module, your system can have expanded features such as 5G/4G, WIFI, GPS, CAN bus, analog frame grabber, etc.

If the module is installed after initial purchase, you may need to return the unit to Neousys Technology or an authorized SEMIL distributor for SMA antenna installation.

M.2 2230 E Key Pin Definition

2.3.3 M.2 2242/ 3052 B Key Slot

Underneath the heat-spreader, the system has an M.2 2242/ 3052 slot (indicated in **blue**) with 5G/ 4G SIM slots (indicated in **red**). A copper standoff is provided for you to secure onto the motherboard into the **red arrow** location for an M.2 2242 module, or into the **blue arrow** location for an M.2 3052 module. By installing a 5G or 4G M.2 module and SIM card, you can access the internet via the provider's network.

3 System Installation

Before disassembling the system enclosure and installing components and modules,

please make sure you have done the following:

- It is recommended that only qualified service personnel should install and service this product to avoid injury or damage to the system.
- Please observe all ESD procedures at all times to avoid damaging the equipment.
- Before disassembling your system, please make sure the system has powered off, all cables and antenna (power, video, data, etc.) are disconnected.
- Place the system on a flat and sturdy surface (remove from mounts or out of server cabinets) before proceeding with the installation/ replacement procedure.

3.1 Accessing the System

Installing after-sales internal modules on your own may affect its waterproof capabilities and is not recommended. If you must install internal modules after purchase, please consult your sales representative as you may need to return the system to Neousys Technology or an authorized SEMIL distributor for processing to retain waterproof capability.

For demonstration purposes, illustrations will only show the accessible section (highlighted in **blue**) of the system for a clearer installation view.

3.2 Mini-PCIe Module Installation

Installing after-sales internal modules on your own may affect its waterproof capabilities and is not recommended. If you must install internal modules after purchase, please consult your sales representative as you may need to return the system to Neousys Technology or an authorized SEMIL distributor for processing to retain waterproof capability.

To install mini-PCIe modules into the system, please refer to the following instructions:

- 1. Disconnect all cable connections and shut down the system.
- 2. Turn the system upside-down and place it on a flat sturdy surface.
- 3. Unscrew the screws indicated in **blue**, in descending order.

4. Gently lift the panel and you will see the internal components.

 If hard drives are installed, disconnect the SATA/ power connector. Pull using the connector body, **DO NOT** pull on the cable!

6. Identify the locations of the mini-PCIe slots and their respective SIM slots.

7. If you are installing 5G/ 4G mini-PCIe modules, please install the respective SIM cards first.

Release the SIM holder

Flip-open the holder and place SIM

Secure the SIM card

8. To install mini-PCIe module, simply insert the module into the slot on a 45 degree angle, press down and secure with a screw.

Insert into slot on a 45 degree angle

Secure the module with a screw

9. Refer to the module's manual and connect the antenna.

- To install an SMA antenna, you may have to return the unit to an authorized Neousys Technology SEMIL distributor to properly install and retain waterproof capability.
- 11. Make sure the O-ring is properly seated in the groove, gently tug all cables back into the enclosure and place the bottom panel back on.

12. Secure the indicated screws at a torque range of 6.3 – 7.7kgf-cm in ascending order to complete the installation procedure.

3.3 M.2 2280 M Key for NVMe SSD Installation

Installing after-sales internal modules on your own may affect its waterproof capabilities and is not recommended. If you must install internal modules after purchase, please consult your sales representative as you may need to return the system to Neousys Technology or an authorized SEMIL distributor for processing to retain waterproof capability.

To install the module into the system, please refer to the following instructions:

- 1. Disconnect all cable connections and shut down the system.
- 2. Turn the system upside-down and place it on a flat sturdy surface.
- 3. Unscrew the screws indicated in **blue**, in descending order.

4. Gently lift the panel and you will see the internal components.

5. If hard drives are installed, disconnect the SATA/ power connector. Pull using the connector body, **DO NOT** pull on the cable!

6. Identify the location of the M.2 slot (indicated in **blue**) underneath the heat-spreader.

7. To install module, remove the heat-spreader by removing the screws indicated.

8. Insert the module on a 45 degree angle, press down and secure with a screw.

9. Remove the protection film on the thermal pad if you are installing the module for the first time.

10. Reinstall the heat-spreader.

11. Make sure the O-ring is properly seated in the groove, gently tug all cables back into the enclosure and place the bottom panel back on.

 Secure the indicated screws at a torque range of 6.3 – 7.7kgf-cm in ascending order to complete the installation procedure.

3.4 M.2 2242/ 3052 B Key Module Installation

Installing after-sales internal modules on your own may affect its waterproof capabilities and is not recommended. If you must install internal modules after purchase, please consult your sales representative as you may need to return the system to Neousys Technology or an authorized SEMIL distributor for processing to retain waterproof capability.

To install the module into the system, please refer to the following instructions:

- 1. Disconnect all cable connections and shut down the system.
- 2. Turn the system upside-down and place it on a flat sturdy surface.
- 3. Unscrew the screws indicated in **blue**, in descending order.

4. Gently lift the panel and you will see the internal components.

 If hard drives are installed, disconnect the SATA/ power connector. Pull using the connector body, **DO NOT** pull on the cable!

 Identify the location of the M.2 2242/ 3052 slot (indicated in blue) and SIM slots (indicated in red) underneath the heat-spreader.

7. To install module, remove the heat-spreader by removing the screws indicated.

8. If you are installing 5G/ 4G mini-PCIe modules, please install the respective SIM cards first.

Release the SIM holder

Flip-open the holder and place SIM

Secure the SIM card

9. Insert the module on a 45 degree angle, press down and secure with a screw.

10. Remove the protector film on the heat-spreader if you are installing the module for the first time.

11. Reinstall the heat-spreader.

12. Make sure the O-ring is properly seated in the groove, gently tug all cables back into the enclosure and place the bottom panel back on.

 Secure the indicated screws at a torque range of 6.3 – 7.7kgf-cm in ascending order to complete the installation procedure.

3.5 M.2 2230 E Key Module Installation

Installing after-sales internal modules on your own may affect its waterproof capabilities and is not recommended. If you must install internal modules after purchase, please consult your sales representative as you may need to return the system to Neousys Technology or an authorized SEMIL distributor for processing to retain waterproof capability.

To install the module into the system, please refer to the following instructions:

- 1. Disconnect all cable connections and shut down the system.
- 2. Turn the system upside-down and place it on a flat sturdy surface.
- 3. Unscrew the screws indicated in **blue**, in descending order.

4. Gently lift the panel and you will see the internal components.

 If hard drives are installed, disconnect the SATA/ power connector. Pull using the connector body, **DO NOT** pull on the cable!

6. Identify the location of the M.2 2230 slot (indicated in **blue**).

7. Insert the module on a 45 degree angle, press down and secure with a screw.

Insert on a 45 degree angle

Secure with a screw

8. Refer to the module's user manual and connect the antenna.

 To install an SMA antenna, you may have to return the unit to an authorized Neousys Technology SEMIL distributor to properly install and retain waterproof capability. 10. Make sure the O-ring is properly seated in the groove, gently tug all cables back into the enclosure and place the bottom panel back on.

 Secure the indicated screws at a torque range of 6.3 – 7.7kgf-cm in ascending order to complete the installation procedure.

3.6 Hard Drive Installation

Installing after-sales internal modules on your own may affect its waterproof capabilities and is not recommended. If you must install internal modules after purchase, please consult your sales representative as you may need to return the system to Neousys Technology or an authorized SEMIL distributor for processing to retain waterproof capability.

To install hard drives into the system, please refer to the following instructions:

- 1. Disconnect all cable connections and shut down the system.
- 2. Turn the system upside-down and place it on a flat sturdy surface.
- 3. Unscrew the screws indicated in **blue**, in descending order.

4. Gently lift the panel and you will see the internal components.

5. If hard drives are installed, disconnect the SATA/ power connector. Pull using the connector body, **DO NOT** pull on the cable!

6. Separate the bracket from the panel by removing the screws indicated in **blue**.

7. Install the hard drive by securing the screws indicated.

8. Connect the SATA/ power cable onto the hard drive.

- 9. Repeat steps 7 and 8 if you need to install another hard drive.
- 10. Make sure the O-ring is properly seated in the groove, gently tug all cables back into the enclosure and place the bottom panel back on.

 Secure the indicated screws at a torque range of 6.3 – 7.7kgf-cm in ascending order to complete the installation procedure.

3.7 Wall-mount Bracket Installation

The system comes with wall-mount installation brackets. The four brackets are interchangeable and can be installed on any of the four locations designated for bracket installation. Please follow the procedures below to install the brackets.

3.7.1 SEMIL-2000GC Wall-mount Bracket Installation

- 1. Remove the four brackets and sixteen screws from the accessory box.
- 2. To install the bracket (in red), simply secure it using the screws (in blue) provided.

45 degree front view

Left side view

3. Repeat the same bracket installation on the other side of the enclosure.

45 degree rear view

Right side view

3.7.2 SEMIL-2000 Wall-mount Bracket Installation

- 1. Remove the four brackets and sixteen screws from the accessory box.
- 2. To install the bracket (in **red**), simply secure it using the screws (in **blue**) provided.

45 degree front view

Left side view

3. Repeat the same bracket installation on the other side of the enclosure.

45 degree rear view

Right side view

3.8 Rack-mount Bracket Installation

The system comes with rack-mount brackets. The two brackets can be installed so the system can be mounted into a standard 19" server cabinet. Please follow the procedures below to install the brackets.

3.8.1 SEMIL-2000GC Rack-mount Bracket Installation

- There are two brackets (in red), two grips (in green) and eight screws (in blue) for this kit.
- 2. Secure the brackets (in **red**) on both sides of the enclosure with the screws (in **blue**) supplied.

Left side bracket

Screws securing the bracket

3. Repeat the same rack mount bracket installation on the other side of the enclosure.

4. The grip (in green) can be found in the accessory box and is an optional installation item. Simply match the grip to the openings on the rack mount bracket and secure with M3 screws (in green) provided in the accessory box.

3.8.2 SEMIL-2000 Rack-mount Bracket Installation (Optional)

- There are two brackets (in red), two grips (in green) and eight screws (in blue) for this kit.
- 2. The larger-sized bracket (in **red**) is to be installed on the left side (next to the power button) of the enclosure with the screws (in **blue**) supplied.

Left side bracket

Screws securing the bracket

3. Repeat the same rack mount bracket installation on the other side of the enclosure.

4. The grip (in green) can be found in the accessory box and is an optional installation item. Simply match the grip to the openings on the rack mount bracket and secure with M3 screws (in green) provided in the accessory box.

4 Ignition Power Control

The ignition power control module for in-vehicle applications is a MCU-based implementation that monitors the ignition signal and reacts to turn on/off the system according to predefined on/off delay. Its built-in algorithm supports other features such as ultra-low power standby, battery-low protection, system hard-off, etc. In this section, we'll illustrate the principle of ignition power control and operation modes.

4.1 Principles of Ignition Power Control

The basic concept of ignition power control module is to control the timing correlation between ignition signal and system power status. A typical timing correlation is described in following diagram.

- When DC power is supplied to the system, MCU starts to periodically detect ignition signal. Note that only MCU is working at this moment and the overall power consumption is less than 2 mW.
- 2. Ignition signal is active (both 12VDC and 24VDC ignition signals are accepted).
- 3. MCU starts to count a pre-defined power-on delay.
- Once power-on delay expired, MCU turns on necessary standby power for the system (3.3VSB & 5VSB).
- 5. A PWRBTN# pulse is then issued to turn on the system (equivalent to one pressing the power button on the front panel).
- 6. The system is booting and becomes operational.
- 7. After a period of time, the ignition signal becomes inactive.
- 8. MCU starts to count a pre-defined power-off delay.
- 9. Once power-off delay expired, another PWRBTN# pulse is issued to perform a soft-off for the system (ex. a normal shutdown process for Windows system).
- 10. The system is completely shut down.
- 11.As MCU detects system is off, it turns off the standby power for the system, and operates in low power mode again (< 2mW power consumption).

4.2 Additional Features of Ignition Power Control

In addition to the typical timing correlation, the ignition power control module offers additional features to provide additional reliability for in-vehicle applications.

1. Low battery detection

The ignition power control module continuously monitors the voltage of DC input when the system is operational. If input voltage is less than 11V (for 12VDC input) or less than 22V (for 24VDC input) over a 60-second duration, it will shut down the system automatically.

2. Guarded power-on/ power-off delay duration

If ignition signal goes inactive during the power-on delay duration, the ignition power control module will cancel the power-on delay process and go back to idle status. Likewise, if ignition signal goes active during the power-off delay duration, the ignition power control module will cancel the power-off delay process and keep the system running.

3. System hard-off

In some cases, system may fail to shutdown via a soft-off operation due to system/ application halts. The ignition power control module offers a mechanism called "hard-off" to handle this unexpected condition. By detecting the system status, it can determine whether the system is shutting down normally. If not, the ignition power control module will force cut-off the system power 10 minutes after the power-off delay duration.

4.3 Wiring Ignition Signal

To have ignition power control for in-vehicle usage, you need to supply IGN signal to the system. The IGN input is located on DC-in M12 L-coded connector. Below is the typical wiring configuration for in-vehicle applications.

- 1. Connect car Battery+ line (12V for sedan, 24V for bus/truck) to V+.
- 2. Connect car Batter-/ GND line to GND.
- 3. Connect ACC line to IGN.

Please make sure the voltage of DC power is correct before you connect it to the system. Supplying a voltage over 48V will damage the system.

Connector Pin Definition

4.4 Configure your Windows system

When applying ignition power control to your system, please make sure you've configured your Windows system to initiate a shutdown process when pressing the power button. By default, Windows 7/ 8/ 10 goes to sleep (S3) mode when power button is pressed. As sleep (S3) is not a complete shutdown behavior, the ignition control function does not recognize the finish of a normal shut down process and thus users will encounter a system hard-off (power cut-off after 10 minutes). Please configure "When I press the power button" to "Shut down" in your Windows system settings.

Power button settings

When I press the power button:

Shut down	•
Do nothing	
Sleep	
Hibernate	
Shut down	

5 System Configuration

5.1 BIOS Settings

The system is shipped with factory-default BIOS settings meticulously programmed for optimum performance and compatibility. In this section, we'll illustrate some of BIOS settings you may need to modify. Please always make sure you understand the effect of change before you proceed with any modification. If you are unsure of the function you are changing, it is recommended to change one setting at a time to see its effect(s).

To enable RS-422/ 485 termination:

- 1. Press F2 when the system boots up to enter the BIOS setup utility.
- 2. Go to [Advanced] \rightarrow [Peripheral Configuration].
- 3. Make sure COM4 port has been enabled.
- 4. Highlight **[RS-422/485 Termination]**, press ENTER, highlight **[Enabled]**, and press ENTER to enable.
- 5. Once set, press F10 to save setting and exit.

5.1.3 Delay for PEG Initialization

This setting offers delay in milliseconds for PEG port initialization and PCI enumeration. By increasing the delay value, it may eliminate compatibility issue(s) with some PCIe add-on cards.

To set PEG delay in milliseconds:

- 1. When system boots up, press F2 to enter BIOS setup utility.
- Go to [Advanced] > [System Agent (SA) Configuration] > [CPU PCle Express Configuration] and press ENTER.
- 3. A small window appears and you may enter delay value before or after PCIe reset in ms.
- 4. When done, press F10 to "Exit Saving Changes"

5.1.4 TPM Availability

Trusted Platform Module (TPM) is a hardware-based cryptoprocessor to secure hardware by integrating cryptographic keys into devices. The system is designed with on-board TPM 2.0 module. As TPM 2.0 requires 64-bit Windows 10 with UEFI boot mode, it is enabled in BIOS by default.

To enable TPM availability:

- 1. When system boots up, press F2 to enter BIOS setup utility.
- Go to [Security] > [TPM Availability], press Enter to bring up Options, Available/ Hidden.
- 3. Highlight your selection, press Enter and press F10 to "Exit Saving Changes".

5.1.5 Power & Performance (CPU SKU Power Configuration)

The system supports Intel® 14th/ 13th/ 12th-Gen CPUs. A unique feature, "**SKU Power Config**" is implemented in BIOS to allow users to specify user-defined SKU power limit. The system is designed to have best thermal performance with CPUs of 65W TDP and an L4 GPU. This feature gives you the flexibility of CPU selection and great balance between computing power and operating temperature range.

Pov	SEMIL-	-2000 Series Setup Utility	Rev. 5. (

5.1.10 Add Boot Options

The "Add Boot Options" allow you to determine whether a newly added device (eg. USB flash disk) is to boot as the first device to boot or the last in the boot sequence.

To set the newly-installed boot device as the first or last boot device:

- 8. Press F2 when the system boots up to enter the BIOS setup utility.
- 9. Go to [Boot] > [Add Boot Options] menu.
- 10. Select [First] or [Last] for your newly-added boot device and press ENTER.
- 11. Highlight your selection and press Enter, press F10 to "Exist Saving Changes".

5.1.11 Watchdog Timer for Booting

The watchdog timer secures the boot process by means of a timer. Once the timer expires, a reset command is issued to initiate another booting process. There are two options in BIOS menu, "*Automatically after POST*" and "*Manually after Entering OS*". When "*Automatically after POST*" is selected, the BIOS automatically stops the watchdog timer after POST (Power-On Self Test) OK. When "*Manually after Entering OS*" is selected, the user must stop the watchdog timer once booted into the OS. This guarantees the system can always boot into the OS, otherwise another booting process will be initiated. For information about programming watchdog timer, please refer to <u>Watchdog Timer & Isolated DIO</u>.

F1 Help	Enter Select ► SubMenu		
1/1 Select Iten			

3. When entering MEBx for the first time, it will ask for the default (old) password. Please type "admin" and press ENTER.

4. The system will then request that you enter a new password. The new password must consists of at least one 7-bit ASCII non alpha-numeric character, above 32 (eg,!, @, \$) and 8 to 32 characters long. Note that under score "_" is considered an alpha-numeric character.

 After typing your new password, it will bring you to the MEBx settings page. For more MEBx configuration details, please refer to <u>Intel® MEBX User Guide</u>.

5.3 RAID Volume Configuration

To set up a RAID 0 or 1 volume in Legacy or UEFI mode, you need to have at least two hard drives or SSDs installed. The system supports RAID configurations in RAID 0 (striping) or RAID 1 (mirror) mode. Users can select the configuration that best suit their needs with RAID 0 (striping) mode offering better hard drive read/ write performances while RAID 1 (mirror) offers better data security.

Please back up hard drive data before you create or modify RAID volume(s) as the process may cause irreversible data deletion. When creating a RAID volume, it is also recommended to use hard drives from the same batch (same brand, model, capacity, rpm rate, etc.) to avoid performance or capacity allocation issues.

5.3.1 RAID Configuration

To set up RAID configuration, you need to pre-configure the SATA mode setting in the BIOS. Please refer to the following steps:

- 1. When system boots up, press F2 to enter BIOS setup utility.
- Go to [Advanced] > [System Agent (SA) Configuration] > [VMD setup menu], and press ENTER.

Advanced			
System Agent (SA) Configuration		v	MD Configuration settings
VT−d	Supported		
Graphics Configuration			
▶VHD setup menu

Max TOLUD	<dynamic></dynamic>		
-1 Help t/s	Select Item	F5/F6 Change Values	F9 Setup Defaults
	Select Item	Enter Select > Subhenu	F10 Save and Exit

3. Select [Enable VMD controller] and press ENTER, highlight [Enabled] and press ENTER.

- 4. Press F10 to "Exit Saving Changes" and reboot the system.
- 5. When the system reboots, press **[F3]** to enter the Device Manager configuration utility.

5.3.2 RAID Volume Setup

1. Once you've press F3 upon system boot up and you are in the Device Manager configuration utility, select [Intel® Rapid Storage Technology] and press ENTER.

 The following screen shows Non-RAID physical disks and the option "Create RAID Volume". Highlight "Create RAID Volume" and press ENTER to begin creating your RAID volume.

3. The Name option allows you to name your RAID volume. Press ENTER when ready to go to the next option.

Intel(R) Rapid Storage Technology				
Intel(R) Rapid Storage Techno	o logy			
Create RAID Volume			Enter a unique volume name that has no special characters and is 16 characters	
Name:	Volume1		or less.

9. A summary and status of the RAID volume will be shown when the RAID volume is successfully created.

10. Press F10 to save and Esc to exit the Intel® Rapid Storage Technology configuration page.

5.3.3 Loading RAID Driver for Windows Installation

To install Windows on the RAID volume you created, please refer to the following procedure:

- Please prepare a bootable Windows installation USB drive with the zip file <u>"f6vmdflpy-x64</u>". Download and unzip the driver files, copy the driver files onto the Windows installation USB drive.
- Connect the Windows installation USB drive into one of the USB connections on the system.
- 3. Windows installation process should automatically begin (if not, please make sure the boot device in BIOS is set properly).
- 4. Select the "Load Driver" icon.

Name	 Total Size	Free Space Type
∜ ∳ <u>R</u> efresh	Eormat	· New

5. In the pop-up Window, select "Browse", go to the directory where you saved the unzipped drivers "f6vmdflpy-x64", and click OK.

elec	t the driver to install
	Load driver
	To install the device driver for your drive, insert the installation media containing the driver files, and then click OK. Note: The installation media can be a CD, DVD, or USB flash drive.
	Browse OK Cancel

Browse For Fold	er	×

From here, follow the standard Windows installation procedures.

6 OS Support and Driver Installation

6.1 Operating System Compatibility

The system supports most operating system developed for Intel® x86 architecture. The following list contains the operating systems which have been tested by Neousys Technology.

- Microsoft Windows 10 LTSC 2021 (x64)
- Ubuntu 20.04.5 LTS, 22.04 LTS, 22.04.1 LTS or other distribution with kernel version ≥ 5.15 */**

NOTE

* For Linux system, user may need to manually compile and install the driver for Intel graphics or I226 GbE controller if the driver is not embedded in kernel. You can visit Intel website for further information.

** For distributions, graphics driver and RAID function may not be completely implemented in its kernel. You may encounter restrictions when using these features, such as triple independent display and RAID. For optimum operation, it is the users' responsibility to manually check for new drivers and upgrades!

Neousys may remove or update operating system compatibility without prior notice. Please contact us if your operating system of choice is not on the list.

6.2 Driver Automatically

The system drivers are available online, please click on this link to download the drivers.

6.3 Driver Installation for Watchdog Timer Control

Neousys provides a driver package which contain function APIs for Watchdog Timer control function. You should install the driver package (WDT_DIO_Setup.exe) in prior to use these functions. Please note that you must install WDT_DIO_Setup_v2.3.1.9 or later versions.

Please refer to this link to download WDT_DIO

Appendix A: Using WDT & DIO

The watchdog timer (WDT) function to ensure reliable system operation. The WDT is a hardware mechanism to reset the system if the watchdog timer is expired. Users can start the WDT and keeping resetting the timer to make sure the system or program is running. Otherwise, the system shall be reset.

In this section, we'll illustrate how to use the function library provided by Neousys to program the WDT functions. Currently, WDT driver library supports Windows 10 x64 and WOW64 platform. For other OS support, please contact Neousys Technology for further information.

Installing WDT_DIO Library

The WDT_DIO function library is delivered in the form of a setup package named **WDT_DIO_Setup.exe**. In prior to program WDT, you should execute the setup program and install the WDT library. Please use the following WDT_DIO_Setup packages according to your operating systems and application.

 For Windows 10 64-bit OS with 64-bit application (x64 mode), please install WDT_DIO_Setup_v2.3.1.9 (x64).exe or later version.

WDT and DIO Library Installation

To setup WDT & DIO Library, please follow instructions below.

1. Execute WDT_DIO_Setup.2.3.0.exe and the following dialog appears.

 Click "Next >" and specify the directory of installing related files. The default directory is C:Weousys\WDT_DIO.

🥠 Setup - Neousys Nuvo/Nuvis/POC Series WDT & DIO 64-bit Li — 🗌 📉 📉
Select Destination Location Where should Neousys Nuvo/Nuvis/POC Series WDT & DIO 64-bit Library be installed?
Setup will install Neousys Nuvo/Nuvis/POC Series WDT & DIO 64-bit Library into the following folder.
To continue, dick Next. If you would like to select a different folder, dick Browse.
C:\Weousys\WDT_DIO(x64) Browse
At least 13.1 MB of free disk space is required.
< Back Next > Cancel

3. Once the installation has finished, a dialog will appear to prompt you to reboot the system. The WDT & DIO library will take effect after the system has rebooted.

4. When programming your WDT or DIO program, the related files are located in

Header File:	Include
Library File:	\Lib
Function	\Manual
Reference:	
Sample Code:	\Sample\WDT_Demo (Demo for Watchdog Timer)
	\Sample\DIO_Demo (Demo for DIO Control)
	\Sample\COS_Demo (Demo for change-of-state DI)*
	\Sample\CAN_Demo (Demo for CAN bus manipulation)*
	\Sample\IGN_Demo (Demo for ignition status manipulation)*
	\Sample\POE_Demo (Demo for PoE per-port on/off control)

WDT Function Reference

InitWDT

Syntax	BOOL InitWDT(void);	
Description:	Initialize the WDT function. You should always invoke InitWDT() before set or start watchdog timer.	
Parameter	None	
Return Value	TRUE: Successfully initialized	
	FALSE: Failed to initialize	
Usage	BOOL bRet = InitWDT()	

SetWDT

Syntax	BOOL SetWDT(WORD tick, BYTE unit);
Description	Set timeout value and unit for watchdog timer. When InitWDT() is invoked, a default timeout value of 255 seconds is assigned.
Parameter	<i>tick</i> WORD value (1 ~ 65535) to indicate timeout ticks. <i>unit</i>
	BYTE value (0 or 1) to indicate unit of timeout ticks.
	0 : unit is minute
	1: unit is second
Return Value	If value of unit is correct (0 or 1), this function returns TRUE, otherwise FALSE.
Usage	WORDtick=255;BYTEunit=1; //unit is second.
	BOOL bRet = SetWDT(tick, unit); //timeout value is 255 seconds

StartWDT

Syntax	BOOL StartWDT(void);
Description	Starts WDT countdown. Once started, the WDT LED indicator will begin blinking. If ResetWDT() or StopWDT is not invoked before WDT countdowns to 0, the WDT expires and the system resets.
Parameter	None
Return Value	If the timeout value is given in correct format (WDT started), this function returns TRUE, otherwise FALSE
Usage	BOOL bRet = StartWDT()

ResetWDT

Syntax	BOOL ResetWDT(void);
Description	Reset the timeout value to the value given by SetWDT().If ResetWDT() or StopWDT is not invoked before WDT countdowns to 0, the WDT expires and the system resets.
Parameter	None
Return Value	Always returns TRUE
Usage	BOOL bRet = ResetWDT()

StopWDT

Syntax	BOOL StopWDT(void);
Description	Stops the countdown of WDT. When WDT has stopped, the WDT LED indicator stops blinking.
Parameter	None
Return Value	Always returns TRUE
Usage	BOOL bRet = StopWDT()

Appendix B: PoE On/ Off Control

The system offers 802.3at PoE+ ports with a unique feature to allow users manually turn on or off the power supply of each PoE port. This can be function can be useful in power device (PD) fault-recovery or power reset.

The function APIs are encapsulated in Neousys WDT_DIO driver package. Please follow the instructions in <u>Appendix A Watchdog Timer & Isolated DIO</u> to install the driver package prior to programming PoE on/off control function.

GetStatusPoEPort

Syntax	BYTE GetStatusPoEPort (Byte port);
Description	Get current on/off status of designated PoE port.
Parameter	port
	BYTE value specifies the index of PoE port. Please refer to the
	following illustration, <i>port</i> should be a value of 1 ~ 7.
Return Value	BYTE value indicating PoE on/off status
	0 if port is disabled (off)
	1 if port is enabled (on)
Usage	BYTE bEnabled = GetStatusPoEPort (3); //Get on/off status of
	PoE Port#3

EnablePoEPort

Syntax	BOOL EnablePoEPort (BYTE port);
Description	Turn on PoE power of designated PoE port.
Parameter	port
	BYTE value specifies the index of PoE port. Please refer to the
	following illustration, <i>port</i> should be a value of 1 ~ 7.
Return Value	TRUE if enabled success
	FALSE if fail to enable.

BOOL bRet = EnablePoEPort (3); //Turn on PoE Port#3

DisablePoEPort

Syntax	BOOL DisablePoEPort (BYTE port);
Description	Turn off PoE power of designated PoE port
Parameter	port
	BYTE value specifies the index of PoE port. Please refer to the
	following illustration, <i>port</i> should be a value of 1 ~ 7
Return Value	TRUE if disabled success
	FALSE if fail to disable
Usage	BOOL bRet = DisablePoEPort (3); //Turn off PoE Port#3
